What shapes people's everyday understandings of inequality? How are understandings of inequality located in everyday concerns moral values and principles of justice? This book considers what provokes everyday views or framings of inequality. It examines how different approaches can help us understand this process drawing on a range of literatures including social attitudes and perceptions research class identities and neoliberalism theories of the psychosocial affect and the abject social constructionism social movements research and pragmatism. The book examines how troubling social situations come to be regarded as inequalities explores how they come to be understood as class gender racial or other kinds of inequality and considers how such inequalities come to be seen as susceptible to intervention and change *How Children Learn to Write Words* Rebecca Treiman, Brett Kessler, 2014 Writing allows people to convey information to others who are remote in time and space vastly increasing the range over which people can cooperate and the amount they can learn. Mastering the writing system of one's language is crucial for success in a modern society. This book examines how children learn to write words. It provides a theoretical framework that integrates findings from a wide range of age groups from children who are producing their first scribbles to experienced spellers who are writing complex words. To set the stage for these discussions early chapters of the book consider the nature of writing systems and the nature of learning itself. The following chapters review various aspects of orthographic development including the learning of symbol shapes and punctuation. Each chapter reviews research with learners of a variety of languages and writing systems revealing underlying similarities. Discussions of how orthography is and should be taught are incorporated into each chapter making the book of interest to educators as well as to psychologists cognitive scientists and linguists. This book is unique in the range of topics and languages that it covers and the degree to which it integrates linguistic insights about the nature of writing systems with discussions of how people learn to use these systems. It is written in a scholarly yet accessible manner making it suited for a wide audience **The Re-emergence of Values in Science Education** Deborah Corrigan, Justin Dillon, Richard Gunstone, 2007 Issues relating to values have always had a place in the school science curriculum. Sometimes this has been only in terms of the inclusion of topics such as the

nature of science and or scientific method and or particular intentions for laboratory work that relate to scientific method sometimes it has been much broader for example in curricula with STS emphases Of importance to aspects of this proposal is that different countries cultures have had different traditions in terms of the place of values in the school science curriculum One obvious very broad difference of this form is the central place in science education thinking in many European countries of bildung and the complete absence of this construct from most science curriculum thinking in English speaking contexts There are numbers of such country cultural differences In the 1990s many countries moved towards various conceptualizations of Outcomes Based Education OBE sometimes so labelled and sometimes not It was usual but not universal for OBE focused science curricula to have constrained views of the values that should be implicit and explicit in curriculum that is views concerned only with the nature of science and scientific method both usually seen as quite unproblematic Currently there are a number of education systems that are changing again and choosing to move away from Outcomes Based Education for example South Africa and several Australian states One of the most interesting features of many of these movements is the re embracing of a wider view of the science curriculum including a reconsideration of the nature and place of the values associated with science in the purposes for and approaches to science education
