Designing and Implementing Quality Investments in Agricultural Water Management

BY: THE WATER FOR FOOD TEAM

Irrigated agriculture has been vital to meeting fast rising food demand and has driven rural development and poverty reduction in developing countries, where the agricultural area under irrigation has doubled over the last forty years. Cereals output increased threefold between 1960 and 1999, while the production of irrigated fresh fruit and vegetables increased fivefold and now accounts for one-fifth of all developing country agricultural exports. More than two-thirds of this increase came from yield increases, and the water needed to feed each person fell by a half. This massive productivity increase was key to reducing world hunger—average daily calorie intake in the developing world went up from 2,054 calories in 1964 to 2,681 calories in 1999.

However, in recent years the pace of irrigation development has slowed as has donor support to the sector. World Bank lending for irrigation and drainage averaged about five percent of total lending in the 1970s and 1980s, but dropped to less than two percent in the early 2000s. In some countries, this reflects constraints to area expansion, in others there has been disappointment with the performance of past investments. There have been considerable technological advances, but the take up of new technology is slow. For instance, although drip technology is widely available, it is used on less than one percent of irrigated lands worldwide. Furthermore, the negative environmental impacts have sometimes been neglected.

Yet the challenge has never been greater. Pressures on agricultural water are intensifying as demand for increased rural incomes and for agricultural produce grows. The World Bank is working to meet these challenges through its three corporate strategies—for rural development, water resources, and environment—which underline the role of higher water productivity and sustainable resource use in rural development and poverty reduction. To achieve these goals, investment in agricultural water management will have to increase and its quality must improve.

In the report *Shaping the Future of Water for Agriculture: A Sourcebook for Investment in Agricultural Water Management* a range of solutions and good practices from World Bank and worldwide experience are documented to meet the challenges of agricultural water management. The Sourcebook has an operational focus, concentrating on investments in policy and institutional reforms and in technology and management to improve water productivity and farming profitability. It provides a basis for training of both specialists and non-specialists, enabling practitioners to see agricultural water management in its bigger context of poverty reduction, growth of livelihoods, and wealth creation. The Sourcebook outlines an
