Philip

Grime, Simon Pierce, 2012-03-26 *THE EVOLUTIONARY STRATEGIES THAT SHAPE ECOSYSTEMS* In 1837 a young Charles Darwin took his notebook wrote I think and then sketched a rudimentary stick like tree Each branch of Darwin's tree of life told a story of survival and adaptation adaptation of animals and plants not just to the environment but also to life with other living things However more than 150 years since Darwin published his singular idea of natural selection the science of ecology has yet to account for how contrasting evolutionary outcomes affect the ability of organisms to coexist in communities and to regulate ecosystem functioning In this book Philip Grime and Simon Pierce explain how evidence from across the world is revealing that beneath the wealth of apparently limitless and bewildering variation in detailed structure and functioning the essential biology of all organisms is subject to the same set of basic interacting constraints on life history and physiology The inescapable resulting predicament during the evolution of every species is that according to habitat each must adopt a predictable compromise with regard to how they use the resources at their disposal in order to survive The compromise involves the investment of resources in either the effort to acquire more resources the tolerance of factors that reduce metabolic performance or reproduction This three way trade off is the irreducible core of the universal adaptive strategy theory which Grime and Pierce use to investigate how two environmental filters selecting respectively for convergence and divergence in organism function determine the identity of organisms in communities and ultimately how different evolutionary strategies affect the functioning of ecosystems This book reflects an historic phase in which evolutionary processes are finally moving centre stage in the effort to unify ecological theory and animal plant and microbial ecology have begun to find a common theoretical framework Companion website This book has a companion website [www.wiley.com/go/grime/evolutionarystrategies](http://www.wiley.com/go/grime/evolutionarystrategies) with Figures and Tables from the book for downloading **Sharks Past and**

**New Observations on the Behavior, Ecology, and Biology of Sharks and Rays** Austin Gallagher,Emily Lester ,Brendan Shea,2025-08-28 Sharks and rays are a group of ancient ecologically important and highly threatened fishes Their large size high mobility and diversity allow for the assessment of the structure and function of large expanses of the ocean while making them a unique model for assessing how species respond to human induced changes such as climate change Despite the notion that many aspects of their biology and ecology remain poorly understood access to this information has never been greater due to the rapid development of emerging technologies and approaches to study sharks and rays in virtually all areas of the ocean from shallow reefs to deep trenches As the global research effort on sharks and rays continues to expand annually we are also increasing the likelihood of making novel behavioral physiological or molecular discoveries as is the potential to expand or refine known correlates of their biology or ecology These exciting observations shed light on future research efforts and aid in adaptive management and conservation

*In the Name of Sharks* François Sarano,2023-10-17 Twenty metres below water the oceanographer François Sarano came face to face with a five and a half metre great white shark Seduced by the gentle elegance of this majestic creature Sarano experienced a profound sense of affinity with her as they swam side by side shoulder to shoulder eye to eye cutting a single figure through the ocean depths It was an experience which made him realize the depth of our ignorance of the lives of sharks leading him to become a passionate advocate for their protection Drawing on the latest scientific research on the biology and ethology of sharks and their exceptional characteristics this book aims to break through the barrier of prejudice and to pay homage to their true nature Representing a last vestige of wildness their populations are nevertheless under threat like so many species they have been hunted and exploited by humans Sarano argues for a change of mindset in which we lose ourselves in the world of the other so that each living entity human and non human can take their rightful place in the broader global ecosystem Also available as an audiobook
