**Bowker's Directory of Videocassettes for Children 1999** R R Bowker Publishing, Bowker, 1999-03 Fluency Doesn't Just Happen with Addition and Subtraction Nicki Newton, Ann Elise Record, Alison J. Mello, 2019-10-28 Fluency in math doesn't just happen. It is a well planned journey. In this book you will find practical strategies and activities for teaching your elementary students basic addition and subtraction facts. The authors lay out the basic framework for building math fluency using a cycle of engagement, concrete, pictorial, abstract and provide a multitude of examples illustrating the strategies in action. You will learn how to help students to model their thinking with a variety of tools, keep students engaged through games, poems, songs and technology, assess student development to facilitate active and continuous learning, implement distributed practices throughout the year, boost parental involvement so that students remain encouraged even as material becomes more complex. A final chapter devoted to action plans will help you put these strategies into practice in your classroom right away. Most importantly you will open the door to deep and lasting math fluency. Succeed with learning The Open University, This 24 hour free course gave guidance on how to build effective learning skills covering some of the key approaches to studying and planning ahead. **Teaching and Learning Algebraic Thinking with 5- to 12-Year-Olds** Carolyn Kieran, 2017-12-04. This book highlights new developments in the teaching and learning of algebraic thinking with 5 to 12 year olds. Based on empirical findings gathered in several countries on five continents it provides a wealth of best practices for teaching early algebra. Building on the work of the ICME 13 International Congress on Mathematical Education Topic Study Group 10 on Early Algebra, well known authors such as Luis Radford, John Mason, Maria Blanton, Deborah Schifter and Max Stephens as well as younger scholars from Asia, Europe, South Africa, the Americas, Australia and New Zealand present novel theoretical perspectives and their latest findings. The book is divided into three parts that focus on i) epistemological/mathematical aspects of algebraic thinking, ii) learning and iii) teaching and teacher development. Some of the main threads running through the book are the various ways in which structures can express themselves in children's developing algebraic thinking, the roles of generalization and natural language and the emergence of symbolism. Presenting vital new data from international contexts, the book provides additional support for the position that essential ways of thinking algebraically need to be intentionally fostered in instruction from the earliest grades. **Learning to Pass CLAIT Plus 2006 (Level 2) Unit 1** P.
