Written in an accessible, easy-to-follow style. Ten Lectures on Language, Cognition, and Language Acquisition Melissa Bowerman, 2018-07-17. In her Beijing lectures, Melissa Bowerman presents a lucid introduction and account of her research on a range of topics: how children acquire the semantics of spatial terms; how they construct categories and acquire the semantics of nouns; and how they master the semantics of verbs in early language acquisition. Bowerman also covers the learning of argument structure and expressions of end state with special attention to the adult speech that guides children and hence also the role of typology in acquisition; how cross-linguistic variation affects, for example, how speakers represent cutting and breaking in different languages; and the relation of the Whorfian Hypothesis to cross-linguistic variations in the semantics of languages. Bowerman's overriding concern throughout is with how children come to master the first language being spoken to them by their parents and caregivers. Parameter Hierarchies and Universal Grammar Ian G.

Roberts, 2019. In this book, Ian Roberts argues that the essential insight of the principles and parameters approach to variation can be maintained, albeit in a somewhat different guise, in the context of the minimalist programme. The book represents a significant new contribution to the formal study of cross-linguistic morphosyntactic variation. *Modern Languages and Learning Strategies* Michael Grenfell, Vee Harris, 1999. This book looks at the many ways in which languages can be taught and at case studies that highlight the practical methods that will help teachers get the best results.

Generative Linguistics Frederick J. Newmeyer, 2002-09-11. Written by one of America's most prominent linguists, the essays in *Generative Linguistics* provide a challenging reappraisal of the Chomskian Revolution, the implications of which are still being debated some three decades on. Here, together for the first time, are all of Frederick J. Newmeyer's writings on the origins and development of generative grammar. Spanning a period of fifteen years, the essays address the nature of the Chomskian Revolution, the deep structure debates of the 1970s and the attempts to apply generative theory to second language acquisition. *Rightward Movement* Dorothee Beerman, David LeBlanc, Henk C. van Riemsdijk, 1997. Symmetries

and asymmetries have always played an important role in linguistic theorizing. From the early works on potentially universal properties of transformational processes, differences between rightward and leftward movement processes were noted and constituted a challenge to theories of conditions on transformations. The upward boundedness of extraposition rules vs the successive cyclic character of question word movement, for example, remains a vexing problem. An idea which has gained considerable prominence in the most recent syntactic work, in particular Noam Chomsky's Minimalist Program and Richard Kayne's Antisymmetry proposal, is that rightward movement simply does not exist. This means, in essence, that what looks like an element that has been moved rightward is either base-generated in its surface position or it is actually moved leftward but all its surrounding materials have been moved leftward even further. Clearly, these radical proposals have generated a large number of new analyses of the relevant phenomena and they have fostered considerable controversy about the viability and desirability of this type of approach. The present volume brings together a representative group of articles discussing a variety of aspects of apparent rightward movement processes, including considerations having to do with parsing and representing the various opposing lines of thought on this matter. Empirically, they cover a wide array of constructions: extraposition, scrambling, quantifier floating, etc., and languages: American Sign Language, Bengali, Dutch, French, Frisian, German, Hindi, Japanese, Marathi, etc.
