Documents concernant le film "Une martyre", 1922, **Specific Stabilization Exercises to Medical Diagnoses of Lumbar Segmental Instability** Eric C. Bull, 2006 Study Design Test re test methodological design using a sample of convenience Objectives Examine the effects of a 6 week criterion based

stabilization program on subjects with surgical and non surgical medical diagnoses of lumbar segmental instability. Dependent variables assessed included Oswestry Low Back Pain Disability Questionnaire and cross sectional area of the lumbar multifidus. Background: Lumbar segmental instability has emerged as a characteristic finding in many phases of spinal pain. Onset of lumbar segmental instability may be insidious in cases of isthmic spondylolisthesis or acute in cases of disc herniation. Surgical treatment of these conditions produces specific atrophy. Lumbar multifidus atrophy persists if specific interventions are not performed. Correlations between cross sectional area of the lumbar multifidus and disability questionnaires have not been demonstrated in these two medical diagnoses. Methods and Measures: All subjects completed the Oswestry Low Back Pain Disability Questionnaire and received real time ultrasound measurements to their lumbar multifidus at pre and post test. A convenience sample of the first 21 subjects participated in the intervention group while the next 17 subjects participated in the control group. Results: Odds ratios demonstrate a 49:1 chance of improvement with this program. Spearman's rank correlations revealed no correlation between change in cross sectional area and improvement in self report questionnaire. Conclusion: This specific stabilization program produces improvements in self report of disability after six weeks. During the study timeframe no measurable change in cross sectional area of the lumbar multifidus was correlated with improvements in Oswestry Low Back Pain Disability Questionnaire scores.

The Lumbar Spine Harry N. Herkowitz, International Society for Study of the Lumbar Spine, 2004. The official publication of the International Society for the Study of the Lumbar Spine, this volume is the most authoritative and up to date reference on the lumbar spine. This edition provides more balance between basic science and clinical material and has been completely reorganized for easy reference. New chapters cover gene therapy, outcomes assessment and alternatives to traditional nonoperative treatment. The editors have also added chapters on preparation for surgery, surgical approaches, spinal instrumentation and bone grafts. Chapters on specific disorders have a consistent structure: definition, natural history, physical examination, imaging, nonoperative treatment, operative treatment, postoperative management, results of surgery and complications.
