The Ultrastructure of Human Tumours Brian Eyden, S. Sankar Banerjee, Yongxin Ru, Paweł Liberski, 2014-02-12 The Ultrastructure of Human Tumours Applications in Diagnosis and Research describes the core features as seen by transmission electron microscopy defining the different types of cellular differentiation in tumours this is relevant for tumour nomenclature and diagnosis which in turn are important for tumour pathologists in their collaboration with oncologists for the treatment of cancer patients The book is divided into 8 chapters Following an introduction on technique and procedure there are chapters on epithelial tumours melanocytic lesions soft tissue and related tumours lymphoma and leukaemia CNS neoplasms and neuroendocrine and neuronal tumours Each chapter includes an introductory text that puts the ultrastructural features in the context of classical pathology The book includes many new findings and interpretations from well known tumours as well as ultrastructural information on several newly described tumour entities not dealt with in existing tumour ultrastructure monographs The book will especially be of value to tumour pathologists who need to solve problem cases with the aid of electron microscopy but also to cancer research and tissue engineering scientists working to develop anti cancer and stem cell based therapies However even those without access to electron microscopy may also benefit from this book since many of the images provide an explanation of the appearances of cells tissues and tumours familiar to pathologists and scientists from light microscopy In this respect it is hoped that this book will stimulate the wider use of electron microscopy in pathology The book is comprehensively referenced 680 pages long and lavishly illustrated with 757 figures Dr Brian Eyden is Consultant Clinical Scientist and Dr S Sankar Banerjee Consultant Histopathologist in the Department of Histopathology Christie NHS Foundation Trust Manchester UK Dr Yongxin Ru is Director of the Department of Electron Microscopy Institute of Hematology and Blood Diseases Hospital Tianjin China Pawe Liberski is Professor in the Department of Molecular Pathology and Neuropathology Medical University d Poland Current Catalog National Library of Medicine (U.S.), 1982 First multi year cumulation covers six years 1965 70 *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1982 Malignant Lymphomas Other Than Hodgkin's Disease Karl Lennert, 1978 A G STANSFELD and J A M VAN UNNIK In joint discussions in 1974 the Club worked out a new terminology that was acceptable to all members and will hopefully be acceptable to other pathologists Since then it has been called the Kiel Classification We are also pleased that the clinicians belonging to the Kiel Lymphoma Study Group foremost A STACHER and G BRITTINGER have been able to present preliminary data on the clinical relevance of the new classification Finally our optimism was fortified by the findings of R J LUKES and R D COLLINS which largely concur with ours in both concept and practical significance This book is divided into six main sections First there is a chapter on normal cytology that supplements and in some respects revises the presentation given in Part A of this Handbook 1961 H K MULLER HERMELINK played a major role in the writing of the first chapter The second chapter is a brief description of the light microscopic techniques that
