Machinations Computational Studies Of Logic Language And Cognition:

Logic, Language and Reasoning Hans Jürgen Ohlbach, U. Reyle, 2012-12-06 This volume is dedicated to Dov Gabbay who celebrated his 50 birthday in October 1995 Dov is one of the most outstanding and most productive researchers we have ever met He has exerted a profound influence in major fields of logic linguistics and computer science His contributions in the areas of logic language and reasoning are so numerous that a comprehensive survey would already fill half of this book Instead of summarizing his work we decided to let him speak for himself Sitting in a car on the way to Amsterdam airport he gave an interview to Jelle Gerbrandy and Anne Marie Mineur This recorded conversation with him which is included gives a deep insight into his motivations and into his view of the world the Almighty and of course the role of logic In addition this volume contains a partially annotated bibliography of his main papers and books The length of the bibliography and the broadness of the topics covered there speaks for itself

Machinations Richard Spencer-Smith, Stephen B. Torrance, 1992 This volume brings together a collection of papers covering a wide range of topics in computer and cognitive science Topics included are the foundational relevance of logic to computer science with particular reference to tense logic constructive logic and Horn clause logic logic as the theoretical underpinnings of the engineering discipline of expert systems a discussion of the evolution of computational linguistics into functionally distinct task levels and current issues in the implementation of speech act theory

Foundations of Speech Act Theory S.L. Tsohatzidis, 2002-09-11 Foundations of Speech Act Theory investigates the importance of speech act theory to the problem of meaning in linguistics and philosophy The papers in this volume written by respected philosophers and linguists significantly advance standards of debate in this area Beginning with a detailed introduction to the individual contributors this collection demonstrates the relevance of speech acts to semantic theory It includes essays unified by the assumption that current pragmatic theories are not well equipped to analyse speech acts satisfactorily and concludes with five studies which assess the relevance of speech act theory to the understanding of philosophical problems outside the area of philosophy of language

Logic and Reality B. Jack Copeland, Jack Copeland, 1996 A N Prior has a special place in the history of postwar philosophy for his highly original work at the intersection of logic and metaphysics His logical innovations have found many applications in the areas of philosophical logic mathematics linguistics and increasingly computer science In addition he made seminal contributions to debates in metaphysics particularly on modality and the nature of time This volume presents a selection of current research in the areas that were of most interest to Prior temporal and tense logic modal logic proof theory quantification and individuation and the logic of agency Both title and contents reflect Prior's view that logic is about the real world and the orientation of the volume is towards the application of logic in philosophy computer science and elsewhere Following Prior modal syntax is now widely applied to the formalization of a variety of subject matters and tense logic has found numerous applications in computing for example in natural language processing logical deduction involving time dependent data program verification and VLSI A

special feature of the volume is the inclusion of three hitherto unpublished pieces by Prior on modal logic and the philosophy of time along with a complete bibliography of Prior's published philosophical writings

Machinations Richard Spencer-Smith, 1992 This volume brings together a collection of papers covering a wide range of topics in computer and cognitive science Topics included are the foundational relevance of logic to computer science with particular reference to tense logic constructive logic and Horn clause logic logic as the theoretical underpinnings of the engineering discipline of expert systems a discussion of the evolution of computational linguistics into functionally distinct task levels and current issues in the implementation of speech act theory
