Bybee, Suzanne Fleischman, 1995-01-01 This volume brings together a collection of 18 papers that look into the expression of modality in the grammars of natural languages with an emphasis on its manifestations in naturally occurring discourse Though the individual contributions reflect a diversity of languages of synchronic and diachronic foci and of theoretical orientations all within the broad domain of functional linguistics they nonetheless converge around a number of key issues the relationship between mood and modality the delineation of modal categories and their nomenclature the grounding of modality in interactive discourse the elusive category irrealis and the relationship of modal notions and categories to other categories of grammar

Participles in Rigvedic Sanskrit John J. Lowe, 2015-04-23 This book examines several thousand examples of tense aspect stem participles in the Rigveda and the passages in which they appear in terms of both their syntax and semantics The Rigveda is an ancient collection of sacred Indian hymns written in Vedic Sanskrit and is one of the oldest extant texts in any Indo European language It is also a poetic text in which deliberate obscurity is the governing aesthetic and in which the rules of language are pushed to their limits in order to produce the ideal poetic expression Many Vedic sentences are of controversial disputed meaning and Vedic scholarship is thus fraught with controversy John J Lowe applies formal linguistic analysis to the data and produces a comprehensive formal model of how participles are used The author uses his findings to

recategorize the data by defining certain stems and stem types as outside the synchronic category of participle on the basis of their syntactic and semantic properties He suggests alternative sources for these forms and considers the linguistic processes that transformed old participles into non participial entities In his conclusion he reassesses the category of participles within the verbal and nominal systems looks at their prehistory in Proto Indo European and describes their universal typological characteristics Among his conclusions are that tense aspect stem participles have the technical properties of adjectival verbs not verbal adjectives and that such participles are not fully dependent on corresponding finite verbal forms That is a perfect participle for example need not share all the semantic and functional features of the finite perfect forms built to the same stem These and many other conclusions drawn either directly challenge or radically revise received opinion and recent work

The Typology of Semantic Alignment Mark Donohue, Søren Wichmann, 2008-01-24 Semantic alignment refers to a type of language that has two means of morphosyntactically encoding the arguments of intransitive predicates typically treating these as an agent or as a patient of a transitive predicate or else by a means of a treatment that varies according to lexical aspect This collection of new typological and case studies is the first book length investigation of semantically aligned languages for three decades Leading international typologists explore the differences and commonalities of languages with semantic alignment systems and compare the structure of these languages to languages without them They look at how such systems arise or disappear and provide areal overviews of Eurasia the Americas and the south west Pacific the areas where semantically aligned languages are concentrated This book will interest typological and historical linguists at graduate level and above
