Products, Volume 1 Saurabh Saran,Vikash Babu,Asha Chaubey,2019-04-09 Green technologies are no longer the future of science but the present With more and more mature industries such as the process industries making large strides seemingly every single day and more consumers demanding products created from green technologies it is essential for any business in any industry to be familiar with the latest processes and technologies It is all part of a global effort to go greener and this is nowhere more apparent than in fermentation technology This book describes relevant aspects of industrial scale fermentation an expanding area of activity which already generates commercial values of over one third of a trillion US dollars annually and which will most likely radically change the way we produce chemicals in the long term future From biofuels and bulk amino acids to monoclonal antibodies and stem cells they all rely on mass suspension cultivation of cells in stirred bioreactors which is the most widely used and versatile way to produce Today a wide array of cells can be cultivated in this way and for most of them genetic engineering tools are also available Examples of products operating procedures engineering and design aspects economic drivers and cost and regulatory issues are addressed In addition there will be a discussion of how we got to where we are today and of the real world in industrial fermentation This chapter is exclusively dedicated to large scale production used in industrial settings

Microorganisms Miroslav Blumenberg,Mona

Shaaban,Abdelaziz Elgaml,2020-07-01 The recent breakthrough in microbial studies has applied next generation sequencing NGS a massive omics analysis to the composition and structure of microbial communities NGS can identify microbes without the need for their cultivation Their mere presence can be ascertained and often quantitated and even their metabolic capabilities of microbial constituents predicted This breakthrough led to an explosive growth in research on microbes Many important advances have been made in human health related studies Indeed gut microbial communities have been extensively analyzed and differences between healthy and diseased microbiomes have been determined Studies of the effects of changes of diet of antibiotic treatments and of probiotics have been published Specific attention has been devoted to human pathogens their mechanisms of causing disease and the potentials for their management and treatment Microbiome studies of natural habitats terrestrial and aquatic have also benefited from NGS methodology Increased understanding of the microbial communities has led to the use microbes as antagonists of pathogens i e as treatments Moreover novel uses of microbes in industrial processes either for synthesis of important compounds or for degradation and handling of waste are being devised In this volume chapters dealing with the cutting edge research in all these fields are presented
