My Little Ababin:

Supreme Court , Beads, Basketball, and a Baby Cornel A. Keeler, 2016-12-21 The book deals with decisions made by the characters that would affect their future lives How it affects their lives is surprising and unpredictable In these stories the characters are driven by their egos The results are sometimes good and sometimes bad and sometimes it is up to the reader s opinion Advances in Wave Interaction and Turbulence Paul A. Milewski, 2001 We often think of our natural environment as being composed of very many interacting particles undergoing individual chaotic motions of which only very coarse averages are perceptible at scales natural to us However we could as well think of the world as being made out of individual waves This is so not just because the distinction between waves and particles becomes rather blurred at the atomic level but also because even phenomena at much larger scales are better described in terms of waves rather than of particles It is rare in both fluids and solids to observe energy being carried from one region of space to another by a given set of material particles much more often this transfer occurs through chains of particles neither of them moving much but each communicating with the next and hence creating these immaterial objects we call waves Waves occur at many spatial and temporal scales Many of these waves have small enough amplitude that they can be approximately described by linear theory However the joint effect of large sets of waves is governed by nonlinear interactions which are responsible for huge cascades of energy among very disparate scales Understanding these energy transfers is crucial in order to determine the response of large systems such as the atmosphere and the ocean to external forcings and dissipation mechanisms which act on scales decades apart The field of wave turbulence attempts to understand the average behavior of large ensembles of waves subjected to forcing and dissipation at opposite ends of their spectrum It does so by studying individual mechanisms for energy transfer such as resonant triads and quartets and attempting to draw from them effects that should not survive averaging This book presents the proceedings of the AMS IMS SIAM Joint Summer Research Conference on Dispersive Wave Turbulence held at Mt Holyoke College MA It drew together a group of researchers from many corners of the world in the context of a perceived renaissance of the field driven by heated debate about the fundamental mechanism of energy transfer among large sets of waves as well as by novel applications and old ones revisited to the understanding of the natural world These proceedings reflect the spirit that permeated the conference that of friendly scientific disagreement and genuine wonder at the rich phenomenology of waves Pablo Picasso Victoria Charles, 2011-07-01 Picasso was born a Spaniard and so they say began to draw before he could speak As an infant he was instinctively attracted to artist s tools In early childhood he could spend hours in happy concentration drawing spirals with a sense and meaning known only to himself At other times shunning children s games he traced his first pictures in the sand This early self expression held out promise of a rare gift M laga must be mentioned for it was there on 25 October 1881 that Pablo Ruiz Picasso was born and it was there that he spent the first ten years of his life Picasso s father was a painter and professor at the School of Fine Arts and Crafts Picasso learnt

from him the basics of formal academic art training Then he studied at the Academy of Arts in Madrid but never finished his degree Picasso who was not yet eighteen had reached the point of his greatest rebelliousness he repudiated academic anemic aesthetics along with realism s pedestrian prose and quite naturally joined those who called themselves modernists the non conformist artists and writers those whom Sabart s called the lite of Catalan thought and who were grouped around the artists caf Els Quatre Gats During 1899 and 1900 the only subjects Picasso deemed worthy of painting were those which reflected the final truth the transience of human life and the inevitability of death His early works ranged under the name of Blue Period 1901 1904 consist in blue tinted paintings influenced by a trip through Spain and the death of his friend Casagemas Even though Picasso himself repeatedly insisted on the inner subjective nature of the Blue Period its genesis and especially the monochromatic blue were for many years explained as merely the results of various aesthetic influences Between 1905 and 1907 Picasso entered a new phase called Rose Period characterised by a more cheerful style with orange and pink colours In Gosol in the summer of 1906 the nude female form assumed an extraordinary importance for Picasso he equated a depersonalised aboriginal simple nakedness with the concept of woman The importance that female nudes were to assume as subjects for Picasso in the next few months in the winter and spring of 1907 came when he developed the composition of the large painting Les Demoiselles d Avignon Just as African art is usually considered the factor leading to the development of Picasso s classic aesthetics in 1907 the lessons of C zanne are perceived as the cornerstone of this new progression This relates first of all to a spatial conception of the canvas as a composed entity subjected to a certain constructive system Georges Braque with whom Picasso became friends in the autumn of 1908 and together with whom he led Cubism during the six years of its apogee was amazed by the similarity of Picasso s pictorial experiments to his own He explained that Cubism s main direction was the materialisation of space After his Cubist period in the 1920s Picasso returned to a more figurative style and got closer to the surrealist movement He represented distorted and monstrous bodies but in a very personal style After the bombing of Guernica during 1937 Picasso made one of his most famous works which starkly symbolises the horrors of that war and indeed all wars In the 1960s his art changed again and Picasso began looking at the art of great masters and based his paintings on ones by Vel zquez Poussin Goya Manet Courbet and Delacroix Picasso s final works were a mixture of style becoming more colourful expressive and optimistic Picasso died in 1973 in his villa in Mougins The Russian Symbolist Georgy Chulkov wrote Picasso s death is tragic Yet how blind and na ve are those who believe in imitating Picasso and learning from him Learning what For these forms have no corresponding emotions outside of Hell But to be in Hell means to anticipate death The Cubists are hardly privy to such unlimited knowledge **The Arnoldfest** Vladimir Igorevich Arnol'd,1999 This volume presents articles originating from invited talks at an exciting international conference held at The Fields Institute in Toronto celebrating the sixtieth birthday of the renowned mathematician Vladimir Arnold Experts from the world over including several from Arnold s school gave illuminating talks and lively poster sessions

The presentations focused on Arnold's main areas of interest: singularity theory, the theory of curves, symmetry groups, dynamical systems, mechanics, and related areas of mathematics. The book begins with notes of three lectures by V. Arnold given in the framework of the Institute's Distinguished Lecturer program. The topics of the lectures are: 1. From Hilbert's Superposition Problem to Dynamical Systems; 2. Symplectization, Complexification, and Mathematical Trinities; 3. Topological Problems in Wave Propagation Theory and Topological Economy Principle in Algebraic Geometry. Arnold's three articles include insightful comments on Russian and Western mathematics and science. Complementing the first is Jürgen Moser's Recollections concerning some of the history of KAM theory.

The Vertebral Artery Bernard George, Claude Laurian, 2012-12-06. Our common interest in surgery of the vertebral artery was born in 1976 when as residents in the same hospital we attended an attempt by two senior surgeons to treat an aneurysm of the vertebral artery at the C 3 level. Long discussions had preceded this unsuccessful trial to decide if surgery was indicated and to choose the surgical route. Finally a direct lateral approach was performed but access was difficult and correct treatment was impossible, resulting in only partial reduction of the aneurysmal pouch. Following this experience we decided to seek a regular and well defined approach for exposition of the vertebral artery. Review of the literature indicated some surgical attempts but the descriptions did not give the impression of safety and reproducibility. No landmark on the described surgical route appeared sufficiently reliable. Henry's anatomical work 1917 gave the only accurate description on vertebral artery anatomy and it became the basis for our work. When the same patient was referred again one year later after a new stroke in the vertebro basilar system we had behind us repetitive experience on cadavers of an original approach to the distal vertebral artery.

The material addresses some of the most common questions about cancer in the young, combining medical facts with practical suggestions and is designed to aid parents in confronting the stress involved in rigorous treatment, frequent visits to the doctor, and hospital interruptions in school attendance and social functions, physical changes, and future uncertainties.
