Prosperity Without Pollution The Prevention Strategy For Industry And Consumers:

Prosperity Without Pollution Joel S. Hirschhorn, Kirsten U. Oldenburg, 1991 The environment is in Global warming Ozone depletion Toxic waste Acid rain Concern that we are sinking ever deeper into environmental debt has sown the seeds of a growing U S Green Movement transplanted from Europe Unfortunately all of the current talk and activity do not add up to a coherent environmental strategy on the part of government industry and environmental organizations Here is the first book to explain why only a preventive environmental strategy can work because growing population consumption and industrialization cripple current rather haphazard remedial efforts Authored by two leading experts this book shows how our society can make more with less be more competitive and less polluting while maintaining our standard of living by reducing and eventually eliminating the production of wastes and pollutants from industry commerce homes farms institutions This may seem far fetched but be prepared to discover in these pages that there can be a middle ground between ecology and economy and that you can help achieve it Youll find data and examples facts few have had access to before that any person can use from engineers in industry to office workers to activists Every concerned citizen will also want to consider the authors innovative suggestions for taxing wastes and using the proceeds to help companies and communities switch to new industrial processes Also you should evaluate their proposals to require meaningful waste and toxicity information on product labels to make bans on chemicals and products a more credible and available corrective measure and to secure permanent high level government support for pollution prevention But above all this book is a self help book for all whose home is Earth An ounce of pollution prevention thats worth a pound of environmental cure A way for concerned individuals to become agents for change in the marketplace the workplace and the voting place Read on

Industrial Pollution Prevention Thomas T. Shen, 2013-06-29 Sustainable economic development is necessary to improve the standard of living and quality of life in the developing countries It is also required to maintain or enhance their attributes for those lands already commercially developed Past experience indicates that one of the most important elements in the economic growth is the development of industry It should be also recognized that developing industry if pursued according to the traditional means entails the additional inefficient consumption of limited national resource and generation of large amount of residue that called industrial pollution In general industry has three generations of pollution problems The first generation pollution problem is from the manufacturing facilities The second generation pollution problem is related to the use of the products after leaving the site of manufacturing The final disposal of the used or unused products represents the third generation pollution problem for industry The traditional way of controlling pollution by industry is building costly waste treatment facilities added on to the end of manufacturing processes Industry also has to commit continuous funding to maintain and operate these facilities for their entire life span The waste treatment facilities were supposed to solve the manufacturing related pollution problem for industry i e the first generation problem In fact these facilities in according to the Law of Conservation do not make the pollution disappeared Research and Development in the Superfund Program United States.
