first part of the book focuses on polymers fibers and textile technologies and these chapters discuss the manufacture sterilization properties and types of biotextiles used for medical applications including nanofibers resorbable polymers and shaped biotextiles The chapters in part two provide a comprehensive discussion of a range of different clinical applications of biotextiles including surgical sutures arterial prostheses stent grafts percutaneous heart valves and drug delivery systems This book provides a concise review of the technologies properties and types of biotextiles used as medical devices In addition it addresses the biological dimension of how to design devices for different clinical applications providing an invaluable reference for biomedical engineers of medical textiles quality control and risk assessment specialists as well as managers of regulatory affairs The subject matter will also be of interest to professionals within the healthcare system including surgeons nurses therapists sourcing and purchasing agents researchers and students in different disciplines Provides an invaluable single source of information on the main types of textile materials and products used for medical implants Addresses the technologies used and discusses the manufacture properties and types of biotextiles Examines applications of biotextiles as medical implants including drug delivery systems and stent grafts and percutaneous heart valves

Late Reconstructions of Injured Ligaments of the Knee K.P. Schulitz, H. Krah, W.H. Stein, 2012-12-06 Different views about the biomechanics of the knee joint and late reconstruction of ligamentous injuries underline the obstacles impeding the establishment of generally acceptable principles for the treatment of such lesions As late as June 1976 HUGHSTON emphasized in the Journal of Bone and Joint Surgery that in spite of excellent anatomic studies substantial uncertainty still prevails in knee joint surgery Even the significance of the anterior drawer sign for ruptures of the anterior cruciate ligament is interpreted quite diversely as illustrated in a comparison of HUGHSTON GIBBS TORR and SCHIECK who give varying opinions concerning the indication related to the age of the patient or possible earlier joint damage as well as concerning the prognosis for untreated knee joints The question still remains as to how often an intra articular ligamentous replacement should be carried out in addition to extra articular techniques

DONOGHUE SLOCUM NICHOLAS HUGHSTON Lastly the question of synthetic ligament replacement must be clarified After basic research has well advanced clinical experience must be discussed Statements concerning the therapeutic value of diverse procedures based solely on knowledge of the literature remain problematic For this reason a workshop was held at the University of Heidelberg in the Orthopedic Clinic Head Prof Dr H. COTTA in June 1977 with the aim of bringing together representatives of the different leading schools in a round table discussion to comment on still unsolved questions

Encyclopedic Handbook of Biomaterials and Bioengineering: v. 1-2. Surgery and Arthroscopy of the Knee Werner Müller, Werner Hackenbruch, 2012-12-06 The need for greater international

collaboration is becoming increasingly clear Practically every nation or people has in addition to its own characteristics and history its own medical tradition Methods and ways of thinking that are successfully established in one place may not be accepted in another for some time The medical tradition and training in different countries can take quite different forms What would our present knowledge be Without the creative spontaneous ideas and contributions from the romance countries Without the opportunity of research as it is practised on a large scale in the USA where so many young Europeans took their first steps in experimental science Without the conscientious clinical work done in Central Europe and the valuable experience gained there Without finally the sober and critical scientific approach as fostered in the cool heads of Northern Europe for generations None of these qualities is sufficient without the others but together they are a source of strength Ultimately we hope through sensible concentration of efforts while maintaining variety to overcome the lack of an integrated approach in experimental science and to prevent repetition of painful mistakes In this regard the first two ESKA congresses have brought us great advances
