Operational Thermoluminescence Dosimetry Claudio Furetta, Pao-shan Weng, 1998-08-08 This book provides a comprehensive description of a dosimetric technique called thermoluminescence dosimetry There are hundreds of scientific papers on thermoluminescence and its applications but none deal with the handling of the technique except for some official documents regarding procedural tests which are now not easily found For this reason the authors have written this book with the aim of describing in detail how to use this dosimetric method This volume is a valuable guide not only on the proper handling of the TL dosimeters but also on the results obtained by their use The book consists of nine chapters The first three chapters cover the theory of thermoluminescence and the experimental methods used to evaluate the kinetics parameters The next three chapters describe the practical aspects of setting up a thermoluminescent dosimetric system specifically suggesting the procedures to be used in handling the TL dosimeters as well as all the related instrumentation The algorithm correlating the TL emission to the radiation dosage is provided and explained The precision and accuracy of the TL measurements are also discussed The last three chapters are devoted to i the practical procedure used in some specific application fields ii a discussion about the lower limit of detection and iii the TL instrumentation Several practical illustrative examples are given throughout the text The book is intended for students and researchers learning new techniques and those working in the area of radiation dosimetry with a specific interest in the TL technique

Handbook of Thermoluminescence Claudio Furetta, 2010 This second edition of the Handbook of Thermoluminescence enlarges on all the subjects which were treated in the first edition and adds further arguments including the theory of thermoluminescent dose measurement several examples concerning the kinetics parameters determination using various methods such as peak shape isothermal decay and so on A special section is devoted to food irradiation an important subject at the present time and to the thermoluminescent characterization of the minerals

extracted from the irradiated food Another new section is devoted to the thermoluminescent phosphors and their main characteristics The analytical treatments of the various thermoluminescent models are fully developed As in the first edition the arguments are given in alphabetical order to ease research This second edition therefore aims to provide real practical support for researchers students and personnel involved in radiation protection services as well as in medical applications

A Protocol-theoretic Framework for the Logic of Epistemic Norms Ralph Jenkins, 2022-09-26 This book defines a logical system called the Protocol theoretic Logic of Epistemic Norms PLEN it develops PLEN into a formal framework for representing and reasoning about epistemic norms and it shows that PLEN is theoretically interesting and useful with regard to the aims of such a framework In order to motivate the project the author defends an account of epistemic norms called epistemic proceduralism The core of this view is the idea that in virtue of their indispensable regulative role in cognitive life epistemic norms are closely intertwined with procedural rules that restrict epistemic actions procedures and processes The resulting organizing principle of the book is that epistemic norms are protocols for epistemic planning and control The core of the book is developing PLEN which is essentially a novel variant of propositional dynamic logic PDL distinguished by more or less elaborate revisions of PDL s syntax and semantics The syntax encodes the procedural content of epistemic norms by means of the well known protocol or program constructions of dynamic and epistemic logics It then provides a novel language of operators on protocols including a range of unique protocol equivalence relations syntactic operations on protocols and various procedural relations among protocols in addition to the standard dynamic modal operators of PDL The semantics of the system then interprets protocol expressions and expressions embedding protocols over a class of directed multigraph like structures rather than the standard labeled transition systems or modal frames The intent of the system is to better represent epistemic dynamics build a logic of protocols atop it and then show that the resulting logic of protocols is useful as a logical framework for epistemic norms The resulting theory of epistemic norms centers on notions of norm equivalence derived from theories of process equivalence familiar from the study of dynamic and modal logics The canonical account of protocol equivalence in PLEN turns out to possess a number of interesting formal features including satisfaction of important conditions on hyperintensional equivalence a matter of recently recognized importance in the logic of norms generally To show that the system is interesting and useful as a framework for representing and reasoning about epistemic norms the author applies the logical system to the analysis of epistemic deontic operators and partly on the basis of this establishes representation theorems linking protocols to the action guiding content of epistemic norms The protocol theoretic logic of epistemic norms is then shown to almost immediately validate the main principles of epistemic proceduralism
