Protecting Species And Habitats:

Protecting Species and Habitats Sue Barraclough, 2005 Features debates on key social and political issues in the 21st century Clearly set out with for and againsts on each question of debate Includes case studies and statistical data

Private Property and the Endangered Species Act Jason F. Shogren, 1998 Our whole nation benefits from the preservation of natural habitats and their diversity of animal and plant species yet small groups of private landowners often bear most of the costs of setting land aside for conservation purposes This imbalance has generated many conflicts since the passage of the Endangered Species Act in 1973 and remains one of the most controversial issues to be resolved as the ESA makes its way through Congress for reauthorization To provide policy makers landowners and other stakeholders in the ESA debates with impartial baseline information this book offers multidisciplinary perspectives on the role that private property plays in protecting endangered species in the United States The opening chapter traces the evolution of the ESA and set forth the parameters of the debate over regulation of private property Four subsequent chapters explore the judicial and economic implications of ESA and suggest how issues of scale and diversity affect the implementation of the ESA on private property The volume concludes with eight principles to help frame the ongoing ESA reauthorization debate developed by the University of Wyoming s Institute for Environment and Natural Resources Policy Board the sponsor of the research presented in this book

Proactive Strategies for Protecting Species C. Josh Donlan, 2015-03-20 Now forty years old the Endangered Species Act ESA remains a landmark act in conservation and one of the world s most comprehensive laws designed to prevent species extinctions and support recovery efforts for imperiled species A controversial law and often subject to political attack the ESA is successful overall but not without difficulties Those who enforce the ESA for example struggle to achieve viable recovery goals for many species At the forefront of challenges is a reactive framework that sometimes leads to perverse incentives and legal battles that strain support and resources Further few species have been delisted Proactive Strategies for Protecting Species explores the perspectives opportunities and challenges around designing and implementing pre listing programs and approaches to species conservation This volume brings together conservation biologists economists private and government stakeholders and others to create a legal scientific sociological financial and technological foundation for designing solutions that incentivize conservation action for hundreds of at risk species prior to their potential listing under the ESA This forward thinking innovative volume provides a roadmap for designing species conservation programs on the ground so they are effective and take place upstream of regulation which will contribute to a reduction in lawsuits and other expenses that arise after a species is listed Proactive Strategies for Species Protection is a guidebook for anyone anywhere interested in designing programs that incentivize environmental stewardship and species conservation
