*Corrosion and Electrochemistry of Zinc* Xiaoge Gregory Zhang,2013-06-29 Humankind s use of zinc stretches back to antiquity and it was a component in some of the earliest known alloy systems Even though metallic zinc was not discovered in Europe until 1746 by Marggral zinc ores were used for making brass in biblical times and an 87% zinc alloy was found in prehistoric ruins in Transylvania Also zinc the metal was produced in quantity in India as far back as the thirteenth century well before it was recognized as being a separate element The uses of zinc are manifold ranging from galvanizing to die castings to electronics It is a preferred anode material in high energy density batteries e g Ni Zn Ag Zn ZnJair so that its electrochemistry particularly in alkaline media has been extensively explored In the passive state zinc is photoelectrochemically active with the passive film displaying n type characteristics For the same reason that zinc is considered to be an excellent battery anode it has found extensive use as a sacrificial anode for the protection of ships and pipelines from corrosion Indeed aside from zinc s well known attributes as an alloying element its widespread use is principally due to its electrochemical properties which include a well placed position in the galvanic series

for protecting iron and steel in natural aqueous environments and its reversible dissolution behavior in alkaline solutions
