Protein Turnover:

Protein Turnover John Conrad Waterlow, 2006-01-01 Written by the leading authority in the area this book provides a comprehensive review of the growing body of research on protein turnover in man and animals that has accumulated over the past 20 years It focuses on protein metabolism at the physiological level and particularly with studies on human beings It discusses the methods that have been used for measuring whole body protein turnover in man the assumptions underlying this work and problems that have been encountered

Protein Turnover J. C. Waterlow, 2006 This book is concerned with protein metabolism at the physiological not the molecular level and particularly with studies on human beings Protein turnover is a vital function no less important than oxygen turnover because of this over the last 20 years there has been an increase in the research on protein turnover in man with parallel work on farm animals Methods that have been used for measuring whole body protein turnover in man the underlying problems and assumptions and the problems that have been encountered are discussed in this comprehensive book

Protein Turnover G. E. W. Wolstenholme, Maeve O'Connor, 2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world

Protein Turnover and Lysosome Function Harold L. Segal, Darrell J. Doyle, 2014-06-28 Protein Turnover and Lysosome Function comprises the proceedings of a symposium under the same title held at the State University of New York at Buffalo on August 21 26 1977 The book discusses mechanisms of protein turnover as well as the identification and characterization of intracellular proteases The text also describes the internalization of macromolecules into the intracellular digestive system the types of specificity entailed and the fate of the membrane material involved in the vacuolization process Biochemists pathologists cell biologists molecular biologists and physiologists will find the book invaluable

Protein Turnover in Mammalian Tissues and in the Whole Body John Conrad Waterlow, Peter J. Garlick, D. J. Millward, 1978

Human Protein Metabolism Stephen Welle, 2012-12-06 Human Protein Metabolism is a succinct review of hundreds of studies on the regulation of protein mass and protein turnover in the human body The biochemistry of protein synthesis and breakdown is summarized and the methods that are used to examine protein metabolism in humans are explained and their limitations discussed The book includes chapters that review the effects of nutrition hormones metabolic substrates and physical activity Various topics of clinical interest are covered including cancer diabetes tissue injury pregnancy renal disease muscular dystrophies and other conditions Normal values are presented for turnover of proteins in the whole body and individual organs and for turnover of many individual proteins This book will be a valuable resource for physiologists nutritionists and clinicians interested in the regulation of body protein stores in health and disease For scientists primarily interested in the basic aspects of protein metabolism it shows how the basic knowledge

is being applied to the study of humans Development of a protein database and the way forward for reviewing protein requirements Food and Agriculture Organization of the United Nations, International Atomic Energy Agency, 2024-06-25

Providing an adequate sustainable and nutritious supply of protein remains an increasing challenge in the light of changing food systems and raised levels of food insecurity and malnutrition A joint FAO and IAEA technical meeting was held in Vienna in 2022 to discuss the development of a protein quality database and the revision of protein requirements across population groups Participants updated evidence and related methods on protein requirements and protein quality assessment and designed a framework for the development of a protein digestibility database to aid dialogue on the evaluation of protein quality and protein sufficiency in different populations The report of this meeting offers a global presentation of the concept of protein quality and requirements throughout the life course It presents the important elements needed to set protein requirements such as indispensable amino acid scores and indispensable amino acid reference patterns and the associated methods The report then narrows down on assessment of protein digestion and metabolic utilization and related assessment methods including stable isotope tracer techniques Finally the report summarizes the framework for a new protein quality database jointly managed by FAO and IAEA which was agreed on by experts at the technical meeting The report also recognizes the dearth of data on protein quality from low and middle income countries and recommends that resources be mobilized to set up a protein quality database inclusive of data on climate smart foods Principles of Perinatal-Neonatal Metabolism Richard M. Cowett, 2012-12-06

Over the last quarter century or so specialization within obstetrics and gynecology and pediatrics has resulted in the development of the disciplines of maternal fetal medicine and neonatology respectively A primary focus of maternal fetal medicine has been to understand the mechanisms of premature delivery and develop treatment modalities for improving the length of gestation A primary focus of neonatology has been to understand the causes of respiratory distress in the neonate Success has resulted not only in the lengthening of gestation but an improved understanding of the causes and treatment of neonatal respiratory disease With increasing success has come the necessity to understand the metabolic principles of the parturient the fetal placenta unit and the neonate These principles are clearly very important from multiple aspects Increased understanding of metabolism of the pregnant woman would explain the aberrations occurring in normal and abnormal pregnancy and improve nutritional support for the parturient A prime example of altered metabolism is the parturient with diabetes Understanding metabolism of the fetal placenta unit is necessary to increase the probability that the fetus will be born appropriate for size irrespective of the gestational age The various components of neonatal metabolism are important not only for understanding the changes in physiology and biochemistry occurring in the developing neonate but the principles by which nutritional support should be provided

Applied Muscle Biology and Meat Science Ph.D., Min Du, Richard J. McCormick, 2009-05-26 Many of the difficulties that meat and animal scientists face when attempting to address specific problems such as stress susceptibility and poor meat

quality in swine stem from a lack of understanding of the underlying biological mechanisms that drive muscle growth metabolism and its conversion to meat This book provides current knowledge about *Hydrolytic Enzymes* K. Brocklehurst, A. Neuberger, 1988-03-01 This newest volume in the impressive New Comprehensive Biochemistry series presents up to date discussions of six types of hydrolytic enzyme that are well characterized structurally aspartic cysteins and serine proteinases carboxypeptidase A pancreatic ribonuclease A and the phosphomonoesterases The emphasis is on molecular mechanisms deduced by crystallographic kinetic spectroscopic and molecular genetic studies The chapters on the various types of proteinases are complemented by others on proteinase inhibitors and intracellular proteolysis This book will prove valuable to researchers in general biochemistry particularly those with interest in enzyme mechanism and protein chemistry and to Honours and Postgraduate students

Bioactive Peptides Richard Owusu-Apenten, 2010-06-23 Bioactive peptides are used to enhance the body's antioxidant status antiseptic capacity immune function anti-inflammatory capacity mineral absorption and appetite They can also mitigate major metabolic derangements arising from chronic illnesses which result in unwanted weight loss Presenting data from human studies clinical trials and recent research findings this work summarizes the applications and benefits of this therapy The book covers host response quality factors protein economics and muscle loss It includes case studies on aging AIDS COPD diabetes inflammatory bowel disease kidney failure and tuberculosis

Gene Discovery for Disease Models Weikuan Gu, Yongjun Wang, 2011-03-03 This book provides readers with new paradigms on the mutation discovery in the post genome era The completion of human and other genome sequencing along with other new technologies such as mutation analysis and microarray has dramatically

accelerated the progress in positional cloning of genes from mutated models In 2002 the Mouse Genome Sequencing Consortium stated that The availability of an annotated mouse genome sequence now provides the most efficient tool yet in the gene hunter s toolkit One can move directly from genetic mapping to identification of candidate genes and the experimental process is reduced to PCR amplification and sequencing of exons and other conserved elements in the candidate interval With this streamlined protocol it is anticipated that many decades old mouse mutants will be understood precisely at the DNA level in the near future The implication of such a statement should be similar to the identification of mutated genes from human diseases and animal models when genome sequencing is completed for them More than five years have passed but genes in many human diseases and animal models have not yet been identified In some cases the identification of the mutated genes has been a bottleneck because the genetic mechanism holds the key to understand the basis of the diseases However an integrative strategy which is a combination of genetic mapping genome resources bioinformatics tools and high throughput technologies has been developed and tested The classic paradigm of positional cloning has evolved with completely new concepts of genomic cloning and protocols This book describes new concepts of gene discovery in the post genome era and the use of streamlined protocols to identify genes of interest This book helps identify not only large insertions deletions but also single nucleotide mutations or polymorphisms that regulate quantitative trait loci QTL

Primary Productivity and Biogeochemical Cycles in the Sea Paul G. Falkowski, Avril D. Woodhead, 2013-11-22

Biological processes in the oceans play a crucial role in regulating the fluxes of many important elements such as carbon nitrogen sulfur oxygen phosphorus and silicon As we come to the end of the 20th century oceanographers have increasingly focussed on how these elements are cycled within the ocean the interdependencies of these cycles and the effect of the cycle on the composition of the earth s atmosphere and climate Many techniques and tools have been developed or adapted over the past decade to help in this effort These include satellite sensors of upper ocean phytoplankton distributions flow cytometry molecular biological probes sophisticated moored and shipboard instrumentation and vastly increased numerical modeling capabilities This volume is the result of the 37th Brookhaven Symposium in Biology in which a wide spectrum of oceanographers chemists biologists and modelers discussed the progress in understanding the role of primary producers in biogeochemical cycles The symposium is dedicated to Dr Richard W Eppley an intellectual giant in biological oceanography who inspired a generation of scientists to delve into problems of understanding biogeochemical cycles in the sea We gratefully acknowledge support from the U S Department of Energy the National Aeronautics and Space Administration the National Science Foundation the National Oceanic and Atmospheric Administration the Electric Power Research Institute and the Environmental Protection Agency Special thanks to Claire Lamberti for her help in producing this volume

Balears,2006-03-30 Respiration in plants as in all living organisms is essential to provide metabolic energy and carbon skeletons for growth and maintenance As such respiration is an essential component of a plant s carbon budget Depending on species and environmental conditions it consumes 25 75% of all the carbohydrates produced in photosynthesis even more at extremely slow growth rates Respiration in plants can also proceed in a manner that produces neither metabolic energy nor carbon skeletons but heat This type of respiration involves the cyanide resistant alternative oxidase it is unique to plants and resides in the mitochondria The activity of this alternative pathway can be measured based on a difference in fractionation of oxygen isotopes between the cytochrome and the alternative oxidase Heat production is important in some flowers to attract pollinators however the alternative oxidase also plays a major role in leaves and roots of most plants A common thread throughout this volume is to link respiration including alternative oxidase activity to plant functioning in different environments *Ciba Foundation Symposium 9 - Protein Turnover* Ciba Foundation,Symposium on Protein
