work by myelin researehers This is undoubtedly the primary faetor aecounting for the high rate of reeidivism among the authors with respeet to preparation of a seeond edition eleven of the original twelve contributors were again involved Four new authors Wendy Cammer Marjorie Lees Ute Traugott and Seymour Greenfield have also eontributed to the present volume This new edition retains many aspects of the format of the original even including use of the same chapter headings Thus comments in the preface to the first edition concerning the level at which material is presented and the relationships between chapters covering the basic and c1inical material are still applicable Despite certain similarities in overall organization comparison of the present edition with the original demonstrates that our eHorts to restriet expansion in the length of the text were not notably successful the new edition is mueh lengthier than the original Nevertheless the increase in text length is modest relative to the increase in information in the seven years separating the preparation of the two editions Most of the material in the individual chapters has had to be completely redone in order to include this new information For example our view of the metabolism of myelin increasingly must take cognizance of a very rapidly turning over pool of certain of its components   *Library of Congress Subject Headings* Library of Congress,1993   *Alterations of Metabolites in the Nervous System* Abel Lajtha,2013-11-11 In neurosciences one may say All roads lead to Rome It seems as though wherever one starts the course of investigation leads to the same major ques tions about nervous system function and dysfunction In thinking about what to write in this preface it occurred to me that it might be best to deal with that with which I am most familiar and to trace to some extent my own road to Rome As I look over my work of the last 37 years it becomes clear to me that it can be epitomized as a search for patterns What usually began as a single minded devotion to in depth analysis of one or a small number of variables always has led to questions of how the results might relate to the whole living unit whether it is cell tissue or organism For a number of years after my discovery in the vertebrate central nervous system of y aminobutyric acid GABA and the enzyme which forms it L glutamate decarboxylase GAD and the identification of GABA as a major inhibitory neurotransmitter by others I felt that my laboratory largely bio chemical was wandering in the wilderness of the complexities of the vertebrate CNS without definitively coming to terms with problems related to GABAergic transmitter functions and the roles of GABA neurons in information processing
