Ralph A. Bradshaw, Diana M. Schneider, 1980      **Functional and Structural Proteins of the Nervous System** A.  
Davison, 2013-03-09 This book is the proceedings of two symposia on Proteins of the Nervous System and Myelin Proteins  
held as part of the Third Meeting of the International Society of Neurochemistry in Budapest July 1971 If confirmation of the  
utility for such a book was needed it was obtained with the independent publication of a review on Proteins of the Nervous  
System 1 covering essentially the same ground This review is an excellent collection of the earlier literature The present  
volume summarizes the more recent advances in this field and in addition covers those areas glycoproteins and peptide  
hydrolases which were not dealt with by Shooter and Einstein 1 We are most grateful to Miss V Troeger for typing the man

Function and Clinical Application focuses on the basic and clinical information relating to a number of proteins that are  
either enriched in or unique to nervous tissue This book discusses the structural and functional characteristics of cell specific  
proteins which provide a better understanding of the molecular mechanisms involved in processes that are specific to glia or  
neurons Organized into three sections encompassing 15 chapters this book starts with an overview of the fundamental  
principles and strategies involved in studying the anatomical structural functional and immunological aspects of brain protein  
This text then discusses the techniques including the preparation of brain tissues as well as the preparation of neural and  
glial cells in purified form Other chapters review the two dimensional gel electrophoresis which is recognized as a significant  
technique for discovering brain molecules The final chapter deals with the membrane associated nervous system proteins

Myelin P. Morell, 2013-03-09 My colleagues and I have been gratified by how rapidly the first edition of Myelin has been accepted as a standard reference work by myelin researchers. This is undoubtedly the primary factor accounting for the high rate of reedition among the authors with respect to preparation of a second edition. Eleven of the original twelve contributors were again involved. Four new authors Wendy Cammer Marjorie Lees Ute Traugott and Seymour Greenfield have also contributed to the present volume. This new edition retains many aspects of the format of the original even including use of the same chapter headings. Thus comments in the preface to the first edition concerning the level at which material is presented and the relationships between chapters covering the basic and clinical material are still applicable. Despite certain similarities in overall organization comparison of the present edition with the original demonstrates that our efforts to restrict expansion in the length of the text were not notably successful. The new edition is much lengthier than the original. Nevertheless the increase in text length is modest relative to the increase in information in the seven years separating the preparation of the two editions. Most of the material in the individual chapters has had to be completely redone in order to include this new information. For example our view of the metabolism of myelin increasingly must take cognizance of a very rapidly turning over pool of certain of its components.
