Nephrotoxic Mechanisms of Drugs and Environmental Toxins George A. Porter,2013-11-21 The majority of the offending toxicants to be reviewed in this volume were developed to help mankind and it is only with prolonged or widespread application that their adverse effects have been recognized Conversely in the case of prescription drugs there has been an attempt to identify the adverse effects in advance and incorporate these risks into the decision of approval for human consumption Unfortunately for those drugs in which recognized injury occurs only after prolonged use such appraisals are made in retrospect Despite this most renal injury induced by drugs or toxicants can be either prevented by excluding drugs with unacceptable side effects or interrupted by eliminating the offending agent once damage is manifested The fact that prevention reversibility or arrest of renal injury is possible provided a major impetus for this publication Since no international registry for nephrotoxic injury exists estimates of incidence must rely on less than ideal sources Recently I together with Dr William Bennett summarized a survey of the frequency of various categories of nephrologic disease Porter and Bennett 1981 Based on this survey we projected that in nearly one of ten patients seeking nephrologic consultation a nephrotoxic etiology may be involved Of cases of end stage renal disease between 3 and 4% are due to drug nephrotoxicity according to recent published results European Dialysis and Transplant Association 1979 For acute renal failure antibiotics and contrast agents persist as major offending agents while for chronic renal failure analgesics remain a worldwide problem

Symposium on Biophysics and Physiology of Biological Transport Liana Bolis,V. Capraro,K.R. Porter,J.D. Robertson,2012-12-06 The study of cell membranes began to attract increasing interest before the turn of the present century with the observations of Overton Since that time many investigators have become interested in the broad problem of structure and function of the membrane and today we find ourselves at a stage in which several branches of research particularly physical chemistry biochemistry biophysics physiology and pharmacology have come together leading to the possibility of obtaining a better perspective of the overall problems The purpose of this Symposium was to assemble in an orderly sequence representations of the knowledge of membranes achieved to date in the areas of the various disciplines It was thought that to bring together many points of view on a problem should allow the conferees to see better what had been accomplished what has been overlooked and what needs further development It is to be hoped that efforts of this type have

and will fulfill the desired purpose This volume contains the majority of the papers contributed by the participants in the Symposium In addition it seemed logical to place at the beginning of each chapter at least one general survey of the subject which would help those who were less acquainted with the problem to derive the most benefit from their reading

Monoclonal Antibodies Heddy Zola, 2013-11-20 This book describes in detail tested techniques for the production and use of monoclonal antibodies It covers those aspects of interest to all scientists working with monoclonal antibodies and presents methods in a step by step format for easy reference The text serves as a laboratory manual and discusses rationale behind each method and the

Pathophysiology of Plasma Protein Metabolism Giulian Mariani, 2012-12-06 This book represents a factual account of the proceedings of an international symposium on the pathophysiology of plasma protein metabolism which was organised in October 1982 by the Plasmapheresis and Immunology Division of the C N R Institute of Clinical Physiology at the University of Pisa Italy Several of the contributors are former members of the International Study Group on Plasma Protein Metabolism the last meeting of which was held in Turin Italy in 1974 under the auspices of the scientific organisation of the same institute The symposium took the form of a series of lectures with the main objective of providing a positive contribution to the state of the art of several topics related to the kinetic and pathophysiological factors regulating the synthesis distribution and degradation of plasma proteins The first four chapters form a group each one considering a special aspect of the kinetics of turnover and distribution of plasma proteins in general particular attention is paid to the recent advances in the field of kinetic modelling the choice of the best models and the optimisation of the experimental designs The next seven chapters consider the regulation of synthesis distribution and catabolism of various classes of plasma proteins including albumin immunoglobulins complement fractions and acute phase proteins The remaining chapters deal with metabolic studies of various plasma proteins including tumour markers coagulation proteins and lipoproteins in different disease states such as malignancies coagulative disorders malnutrition and the extensive group of atherosclerotic cardiovascular diseases

Renal and Adrenal Tumors Eberhard Löhr, Lutz-Dietrich Leder, 2012-12-06 After the positive response which followed the first edition of this book 6 years ago the editors were encouraged to prepare a completely reworked second edition that includes the modern advances in this field There has been a complete change of diagnostic procedure in the detection of renal tumors which is now based on sonography computed tomography and nuclear magnetic resonance imaging pushing intravenous urography and angiography completely into the background Also new methods of treatment with radionuclides using embolisation are incorporated The description of morphological structures forms the basis for understanding and recognising pathology of the kidneys and adrenals The contents of pathological morphology could be extended as we are of the opinion that the detection and therapy of renal and adrenal tumors are derived from different areas of diagnostic science We are indebted to Springer Verlag for the excellent book production On behalf of all the authors we would like to thank our colleagues and associates for their cooperation in the realisation of this

project The editors hope that this volume will be of interest to radiologists pathologists urologists pediatricists and also radiotherapists Essen April 1987 EBERHARD LOHR LUTZ DIETRICH LEDER Table of Contents Pathology of Renal and Adrenal Neoplasms LEDER L D RICHTER H I Immunochemical Techniques for the Identification and Estimation of Macromolecules J. Connors, J.J. Roberts, 2012-12-06 It was a great pleasure and honour to have been invited to attend this Seminar and to present a final impression The association in this field between the Chester Beatty Research Institute and Dr Rosenberg's School at East Lansing is something which I specially value and many would doubtless like to know how it came about In the course of its work in carcinogenesis and on chemotherapy over many years the Chester Beatty Research Institute was frequently drawn to the importance of many metals as for example lead iron metalloid arsenic and the metalloid qualities of the carcinogenic hydrocarbons Interest started in platinum many years ago following the possibility claimed by others that various complexes between the metal and mercaptopurine might possess significant chemotherapeutic properties Various attempts to confirm such findings ended however in complete failure Interest in platinum was revived by the fresh observations of Dr Rosenberg and his colleagues and here the outcome was entirely different Very soon it was possible to confirm the intense growth inhibitory properties of cis platinum II diamminedichloride and related substances After communicating these results to Dr Rosenberg it was a pleasure to welcome him in London where he gave a Seminar which greatly engaged the interest of many of the staff Later several of these were to enjoy Dr Rosenberg's hospitality at an international conference on the subject to be held in East Lansing where many rapidly developing aspects were open for discussion
