Vuong, Samuel T. Chanson, 2013-11-11 This PSTV 94 Symposium is the fourteenth of a series of annual meetings organized under the auspices of IFIP WG 6.1 a Working Group dedicated to Architectures and Protocols for Computer Networks This is the oldest and most established symposium in the emerging field of protocol engineering which has spawned many international conferences including FORTE International Conference on Formal Description Techniques IWPTS International Workshop on Protocol Test Systems ICNP International Conference on Network Protocols and CAV Conference on Computer Aided Verification The main objective of this PSTV symposium is to provide a forum for researchers and practitioners in industry and academia interested in advances in using formal methods and methodologies to specify develop test and verify communication protocols and distributed systems This year's PSTV symposium enjoys a nice mixture of formal methods and practical issues in network protocols through the invited addresses of three outstanding speakers Ed Brinksma University of Twente Raj Jain Ohio State University and David Tennenhouse MIT as well as 5 tutorials in addition to 9 technical sessions and two practical panel sessions The 5 tutorials are offered on the first day in two parallel tracks for intensive exposure on hot topics of current

interest This year out of 51 submissions the Program Committee selected 18 regular papers with an allotment of 16 pages in the Proceedings and 9 mini papers of 8 pages *Formal Description Techniques and Protocol Specification, Testing and Verification* Atsushi Togashi,Tadanori Mizuno,Norio Shiratori,Teruo Higashino,2013-06-05 FORTE PSTV 97 addresses Formal Description Techniques FDTs applicable to Distributed Systems and Communication Protocols such as Estelle LOTOS SDL ASN 1 TTCN Z Automata Process Algebra Logic The conference is a forum for presentation of the state of the art in theory application tools and industrialization of FDTs and provides an excellent orientation for newcomers *Testing of Communicating Systems* Bernd Baumgarten,Heinz-Jürgen Burkhardt,Alfred Giessler,2013-06-05 This volume contains the proceedings of the IFIP WG 6.1 International Workshop on Testing of Communicating Systems IWTCs 96 held in Darmstadt Germany on September 9 through 11 1996 continuing the IFIP WG 6.1 series of International Workshops on Protocol Test Systems IWPTS In this series of working conferences held annually since 1988 many valuable contributions have been presented with an emphasis both on the OSI conformance testing methodology and framework as well as the standardization effort on formal methods in conformance testing While there are still open issues and divergencies between theory and practice in these fields the scope of the series started expanding to related fields of growing practical relevance for example to testing with regard to the B-ISDN protocol reference model in particular ATM the ODP reference model and the Internet protocol suite as well as to interoperability testing and performance testing To reflect the extended scope the program committee agreed on a new name for this series of working conferences to be applied the first time to the 1996 conference However in order to emphasize the tradition of IWPTS the numbering of this series was continued such that IWTCs 96 is counted as the 9th International Workshop on Testing of Communicating Systems As in the years before the workshop aims at bringing together researchers and practitioners furthering the exchange of views and correlating the work of both sides

LOTOSphere: Software Development with LOTOS Tommaso Bolognesi,Jeroen van de Lagemaat,Chris Vissers,2012-12-06 LOTOS Language Of Temporal Ordering Specification became an international standard in 1989 although application of preliminary versions of the language to communication services and protocols of the ISO OSI family dates back to 1984 This history of the use of LOTOS made it apparent that more advantages than the pure production of standard reference documents were to be expected from the use of such formal description techniques LOTOSphere Software Development with LOTOS describes in depth a five year project that moved LOTOS out of the ISO tower into software engineering practice LOTOS became a vehicle for efficient yet formally based industrial software specification design verification implementation and testing LOTOSphere Software Development with LOTOS is divided into six parts The first introduces the reader to LOTOS and the project LOTOSphere The five remaining each treat an important part of the software development life cycle using LOTOS This is the first book to give a comprehensive treatment of the use of these formal description techniques in a software engineering environment It will thus be a valuable reference for researchers and software developers and can also

be used as a text for an advanced course on the subject Formal Description Techniques VII D. Hogrefe, S. Leue, 2016-01-09 This book presents the latest research in formal techniques for distributed systems including material on theory applications tools and industrial usage of formal techniques *Protocol Test Systems* Tadanori Mizuno, Teruo Higashino, Norio Shiratori, 2013-03-09 This book presents the latest research results in protocol testing It contains the complete proceedings of the seventh IFIP WG6.1 International Workshop on Protocol Test Systems IWPTS 94 organized by the International Federation for Information Processing and held in Tokyo Japan in November 1994 The book presents an alliance between research and industry and between the theory and practice of testing of data communication systems

Theories And Experiences For Real-time System Development Charles Rattray, Teodor Rus, 1995-02-14 Our understanding of real time systems is rapidly approaching a level of maturity which calls for a consolidation of our

present knowledge and experience. Particularly effective in influencing our understanding has been the conjoining of universal algebra with the theory and practice of real time system development. This interplay between algebraic methodology and software technology AMAST for real time systems is the theme for this text. Each chapter derived from papers presented at the all invitation 1st AMAST International Workshop on Real Time Systems Iowa 1993 is written by leaders in their field. The chapters form an intriguing mix of modeling, specification, verification, and implementation of real time systems. They cover untimed and timed systems, sequential, concurrent, and embedded real time processes, integrated models using state machines, temporal logic, and algebraic data models, real time CSP, verification tools, system design using temporal logic, symbolic checking of discrete time models, iterative symbolic approximation in timing verification, and verification of audio protocols, timed full LOTOS and timed LOTOS extensions, LOTOS specification of telephone services, and flight warning computers and performance analysis.
