speaking this field is concerned with the size of objects in various mathematical models of computation such as finite automata pushdown automata and Turing machines Descriptive complexity serves as a theoretical representation of physical realizations such as the engineering complexity of computer software and hardware It also models similar complexity phenomena in other areas of computer science including unconventional computing and bioinformatics

Exploring New Frontiers of Theoretical Informatics Jean-Jacques Lévy, Ernst W. Mayr, John C. Mitchell, 2006-04-11 In recent years IT application scenarios have evolved in very innovative ways Highly distributed networks have now become a common platform for large scale distributed programming high bandwidth communications are inexpensive and widespread and most of our work tools are equipped with processors enabling us to perform a multitude of tasks In addition mobile computing referring specifically to wireless devices and more broadly to dynamically configured systems has made it possible to exploit interaction in novel ways To harness the flexibility and power of these rapidly evolving interactive systems there is need of radically new foundational ideas and principles there is need to develop the theoretical foundations required to design these systems and to cope with the many complex issues involved in their construction and there is need to develop effective principles for building and analyzing such systems Reflecting the diverse and wide spectrum of topics and interests within the theoretical computer science community *Exploring New Frontiers of Theoretical Informatics* is presented in two distinct but interrelated tracks Algorithms Complexity and Models of Computation Logic Semantics Specification and Verification *Exploring New Frontiers of Theoretical Informatics* contains 46 original and significant contributions addressing these foundational questions as well as 4 papers by outstanding invited speakers These papers were presented at the 3rd IFIP International Conference on Theoretical Computer Science TCS 2004 which was held in conjunction with the 18th World Computer Congress in Toulouse France in August 2004 and sponsored by the International Federation for Information Processing IFIP **Proceedings of the St. Petersburg Mathematical Society** Nina Nikolaevna Ural'tseva,

Complexity Theory Retrospective Alan L. Selman, 2012-12-06 In 1965 Juris Hartmanis and Richard E Stearns published a paper On the Computational Complexity of Algorithms The field of complexity theory takes its name from this seminal paper and many of the major concepts and issues of complexity theory were introduced by Hartmanis in subsequent work In honor of the contribution of Juris Hartmanis to the field of complexity theory a special session of invited talks by Richard E Stearns Allan Borodin and Paul Young was held at the third annual meeting of the Structure in Complexity conference and the first three chapters of this book are the final versions of these talks They recall intellectual and professional trends in Hartmanis contributions All but one of the remainder of the chapters in this volume originated as a presentation at one of the recent meetings of the Structure in Complexity Theory Conference and appeared in preliminary form in the conference proceedings In all these expositions form an excellent description of much of contemporary complexity theory Operator Theory and Its Applications Michael Levitin, Dmitrii G. Selected Papers on Analysis and Differential Equations 田中重光, 2003 This volume contains translations of papers that originally appeared in the Japanese journal Sugaku Ordinarily the papers would appear in the AMS translation of that journal but to expedite publication the Society has chosen to publish them as a volume of selected papers The papers range over a variety of topics including nonlinear partial differential equations C algebras and Schrodinger operators The volume is suitable for graduate students and research mathematicians interested in analysis and differential equations *Model Theory and Applications* O.V. Belegadek, This volume is a collection of papers on model theory and its applications The longest paper Model Theory of Unitriangular Groups by O V Belegadek forms a subtle general theory behind Mal'tsev's famous correspondence between rings and groups This is the first published paper on the topic Given the present model theoretic interest in algebraic groups Belegadek's work is of particular interest to logicians and algebraists The rest of the collection consists of papers on various questions of model theory mainly on stability theory Contributors are leading Russian researchers in the field *Proceedings of the St. Petersburg Mathematical Society, Volume XIV* Sankt-Peterburgskoe matematicheskoe obshchestvo, 2009 Contains articles on analysis probability partial differential operators frames and other areas of mathematics This volume also contains a comprehensive article about the classification of pseudo regular convex polyhedra It is suitable for a broad group of graduate students and researchers interested in the topics presented here
