Multiplicative Ideal Theory in Commutative Algebra James W. Brewer, Sarah Glaz, William Heinzer, Bruce Olberding, 2006-12-15 For over forty years Robert Gilmer's numerous articles and books have had a tremendous impact on research in commutative algebra It is not an exaggeration to say that most articles published today in non Noetherian ring theory and some in Noetherian ring theory as well originated in a topic that Gilmer either initiated or enriched by his work This volume a tribute to his work consists of twenty four articles authored by Robert Gilmer's most prominent students and followers These articles combine surveys of past work by Gilmer and others recent results which have never before seen print open problems and extensive bibliographies In a concluding article Robert Gilmer points out directions for future research highlighting the open problems in the areas he considers of importance Robert Gilmer's article is followed by the complete list of his published works his mathematical genealogical tree information on the writing of his four books and reminiscences about Robert Gilmer's contributions to the stimulating research environment in commutative algebra at

Florida State in the middle 1960s The entire collection provides an in depth overview of the topics of research in a significant and large area of commutative algebra      **Ideal Theory of Commutative Rings and Monoids** Franz

Chapman,Sarah

Glaz,2013-03-09 Commutative Ring Theory emerged as a distinct field of research in mathematics only at the beginning of the twentieth century It is rooted in nineteenth century major works in Number Theory and Algebraic Geometry for which it provided a useful tool for proving results From this humble origin it flourished into a field of study in its own right of an astonishing richness and interest Nowadays one has to specialize in an area of this vast field in order to be able to master its wealth of results and come up with worthwhile contributions One of the major areas of the field of Commutative Ring Theory is the study of non Noetherian rings The last ten years have seen a lively flurry of activity in this area including a large number of conferences and special sections at national and international meetings dedicated to presenting its results an abundance of articles in scientific journals and a substantial number of books capturing some of its topics This rapid growth and the occasion of the new Millennium prompted us to embark on a project aimed at presenting an overview of the recent research in the area With this in mind we invited many of the most prominent researchers in Non Noetherian Commutative Ring Theory to write expository articles representing the most recent topics of research in this area      **Geometric**
