

## TEST BANK - PSYCHIATRIC MENTAL HEALTH NURSING BY MARY TOWNSEND (9TH EDITION)

### Chapter 03. Psychopharmacology

#### Multiple Choice

1. The nurse manager on the psychiatric unit was explaining to the new staff the differences between typical and atypical antipsychotics. The nurse correctly states that atypical antipsychotics:

- A. Remain in the system longer
- B. Act more quickly to reduce delusions
- C. Produce fewer extrapyramidal effects
- D. Are risk free for neuroleptic malignant syndrome (NMS)

ANS: C

Atypical antipsychotics produce less D2blockade; thus movement disorders are less of a problem. No evidence suggests that the medication remains in the system longer nor that it acts more quickly to reduce delusions. The atypicals are not risk free for NMS.

**KEY: Cognitive Level:** Application | **Integrated Processes:** Nursing Process: Implementation | **Client Need:** Physiological Integrity: Pharmacological and Parenteral Therapies

2. The nurse would assess for neuroleptic malignant syndrome (NMS) if a patient on haloperidol (Haldol) develops a:

- A. 30 mm Hg decrease in blood pressure reading
- B. Respiratory rate of 24 respirations per minute
- C. Temperature reading of 104° F
- D. Pulse rate of 70 beats per minute

ANS: C

Increased temperature is the cardinal sign of NMS. This BP is not a significant feature of NMS. There are no significant findings to support the options related to respirations or pulse rate.

**KEY: Cognitive Level:** Application | **Integrated Processes:** Nursing Process: Assessment | **Client Need:** Physiological Integrity: Pharmacological and Parenteral Therapies

3. A patient taking fluphenazine (Prolixin) complains of dry mouth and blurred vision. What would the nurse assess as the likely cause of these symptoms?

- A. Decreased dopamine at receptor sites
- B. Blockade of histamine
- C. Cholinergic blockade
- D. Adrenergic blocking

ANS: C

Fluphenazine administration produces blockade of cholinergic receptors giving rise to anticholinergic effects, such as dry mouth, blurred vision, and constipation.
