## **Rules For Building Classing Steel 1973:**

Offshore Mobile Drilling Units ,1973      **Rules for Building and Classing Underwater Systems and Vehicles, 1979**  
American Bureau of Shipping,1979      *Fracture-control Guidelines for Welded Steel Ship Hulls* Stanley Theodore Rolfe,David  
M. Rhea,Bogdan O. Kuzmanovic,1974 The Report provides comprehensive toughness criteria for welded ship hulls that can  
be used for steels of all strength levels Because of the fact that stress concentrations are always present in large complex  
welded structures and therefore high stresses as well as discontinuities or flaws will be present in welded ship hulls primary  
emphasis in the proposed fracture control guidelines is placed on the use of steels with moderate levels of notch toughness  
and on the use of properly designed crack arresters In general concepts of fracture mechanics are used to develop the  
material toughness level that is required for fail safe operation of welded ship hulls      **Marine Safety Manual: Technical**  
United States. Coast Guard,1985      *An Index of U.S. Voluntary Engineering Standards, Supplement 2* William J.  
Slattery,1975      Marine safety manual United States. Coast Guard,1985      **Examination of Service and Stress Data of**  
**Three Ships for Development of Hull Girder Load Criteria** J. F. Dalzell,N. M. Maniar,M. W. Hsu,1979 This is a follow on  
project to SSC 240 Load Criteria for Ship Structural Design which proposed methods for the estimation and superposition of  
the primary loads and performed sample calculations for one conventional dry cargo ship It involved the following bending  
moments still water due to weight and buoyancy ships own wave train quasi static wave induced vertical and lateral  
combined dynamic loads including slamming whipping and springings and thermal effects Here the service and full scale  
stress data of three larger and or faster ships Containership SL 7 Bulk Carrier FOTINI L and very large Crude Carrier  
UNIVERSE IRELAND are examined for the purpose of the eventual development of hull girder criteria The examination is  
limited to extreme midship bending moment loads which are related to the ultimate strength An assessment is made of the  
compatibility between the service and stress data of the distinctly different study ships and the analysis methods of SSC 240  
and their assumptions for cargo ship type Considerable insight is obtained into the probable correct mathematical  
approximations of the loads and their interrelationships It appears that still water bending moments can be approached  
probabilistically however considerable additional information on experienced loading conditions must be gathered to  
determine the statistical distributions Additional effort is required to determine the suitable probabilistic expression and a  
synthesis method for the contribution of vibration to the extreme load Author      An Index of U.S. Voluntary Engineering
