Sacred Beetle And Other Great Essays In Science:

The Sacred Beetle and Other Great Essays in Science Martin Gardner, 1986 **The Sacred Beetle and Other Great Essays in Science** Martin Gardner, 1985 **The Magic Numbers of Dr. Matrix** Martin Gardner, 2020-10-06 Martin Gardner's Mathematical Games columns in Scientific American inspired and entertained several generations of mathematicians and scientists. Gardner in his crystal clear prose illuminated corners of mathematics especially recreational mathematics that most people had no idea existed. His playful spirit and inquisitive nature invite the reader into an exploration of beautiful mathematical ideas along with him. These columns were both a revelation and a gift when he wrote them; no one before Gardner had written about mathematics like this. They continue to be a marvel. This volume is a collection of Irving Joshua Matrix columns published in the magazine from 1960-1980. There were several collections of Dr. Matrix; the first in 1967, they were revised as Gardner reconnected with the good doctor over the years. This is the 1985 Prometheus Books edition and contains all the Dr. Matrix columns from the magazine. Science and the Search for God Gary A. Kowalski, 2003. Harvard-educated theologian Gary Kowalski argues that many of the ills of the modern world from the rise of fundamentalist intolerance to secular society's endless and empty search for thrills stem from the mistaken view that science and faith are antagonists rather than natural allies. Both science and faith, the author suggests, compel us now to move beyond materialism toward an understanding of the world that includes the realities of consciousness and spirit. In the twenty-first century, human beings have less reason than before to feel they hold a privileged or special position in the cosmos but more cause than ever to feel connected and akin to all that is. Christians and Jews, skeptics and seekers alike will find that this brief persuasively written volume sheds new light on the old questions: Who are we? Where do we figure in the larger scheme of things? And what can we honestly believe? **Great Essays in Science** Martin Gardner, 1957 **Literature for Science and Mathematics** DIANE Publishing Company, 1998. Identity in Physics Steven French, Décio Krause, 2006-06-22 Can quantum particles be regarded as individuals just like books tables and people According to the received view articulated by several physicists in the immediate aftermath of the quantum revolution quantum physics itself tells us they cannot quantum particles unlike their classical counterparts must be regarded as non individuals in some sense However recent work has indicated that this is not the whole story and that the theory is also consistent with the position that such particles can be taken to be individuals albeit at a metaphysical price Drawing on philosophical accounts of identity and individuality as well as the histories of both classical and quantum physics the authors explore these two alternative metaphysical packages In particular they argue that if quantum particles are regarded as individuals then Leibniz's famous Principle of the Identity of Indiscernibles is in fact violated Recent discussions of this conclusion are analysed in detail and again the costs involved in saving the Principle are carefully considered Taking the alternative package the authors deploy recent work in non standard logic and set theory to indicate how we can make sense of the idea that objects can be non individuals The concluding chapter suggests how these results might then be extended to quantum field theory Identity in Physics brings together a range of work in this area and further develops the authors own contributions to the debate Uniquely as the title indicates it situates this work in the appropriate formal historical and philosophical contexts

Religion and the Sciences of Origins Kelly James Clark, 2014-05-21 This concise introduction to science and religion focuses on Christianity and modern Western science the epicenter of issues in science and religion in the West with a concluding chapter on Muslim and Jewish Science and Religion This book also invites the reader into the relevant literature with ample quotations from original texts
