Mass Transfer And Kinetics Of Ion Exchange:

Mass Transfer and Kinetics of Ion Exchange L. Liberti, F.G. Helfferich, 2012-12-06 While ion exchange processes were originally used for the treatment of very dilute solutions many applications for the treatment of concentrated solutions have been developed in recent years In these situations the mass transfer bottlenecks are located in the solid rather than the liquid phase Therefore the development of quantitative models for ion exchange kinetics requires knowledge about the conductance characteristics of ions and solvent in the solid phase A useful approach towards this aim is the study of transport characteristics of these species and of their interactions in solid ion exchange membranes Many different transport processes and related phenomena can be observed in membrane solution systems e.g. ion migration, electroosmosis, diffusion, self-diffusion, osmosis, hydraulic flow, hyperfiltration, reverse osmosis or ultrafiltration, streaming potential and streaming current and membrane potentials also called membrane concentration potentials It is important to correlate all these phenomena so as to avoid a very large number of unnecessary measurements Such correlation is often possible Meares 1976 since all these phenomena are determined by the ease of migration of the different species across the membrane Important correlations have been made and summarized even before high capacity ion exchange membranes became commercially available Sollner 1950 1971j *Fundamentals of Water Treatment Unit Processes* David Hendricks, 2016-04-19 Carefully designed to balance coverage of theoretical and practical principles *Fundamentals of Water Treatment Unit Processes* delineates the principles that support practice using the unit processes approach as the organizing concept The author covers principles common to any kind of water treatment for example drinking water, municipal wastewater **Ion-Exchange Chromatography and Related Techniques** Pavel Nesterenko, Colin Poole, Yan Sun, 2023-11-15 *Ion-Exchange Chromatography and Related Techniques* defines the current state of the art in ion exchange chromatography and related techniques and their implementation in laboratory and industrial practice This book provides a compact source of information to facilitate the transfer of knowledge and experience acquired by separation science specialists to colleagues from diverse backgrounds who need to acquire fundamental and practical information to facilitate progress in research and management functions reliant on information acquired by separation Individual chapters written by recognized experts lending credibility to the work will allow this book to serve as a high value reference source of current information for analytical and biopharmaceutical chemists Includes individual chapters written by recognized authoritative and visionary experts in the field to provide an overview and focused treatment of a single topic Presents comprehensive coverage of ion exchange techniques from theory to methods to selected applications for ions and biopolymers Provides Tables and diagrams with commonly used data to facilitate practical work comparison of results and decision making Continuous Biopharmaceutical Processes David Pfister, Lucrèce Nicoud, Massimo Morbidelli, 2018-10-11 Provides a coherent and critical view on the potential benefits of various continuous processes in the biopharmaceutical industry *Biopharmaceutical*

Processing Gunter Jagschies, Eva Lindskog, Karol Lacki, Parrish M. Science, 2012-12-06. The world's need for food and fiber continues to increase. Population growth in the developing countries peaked at 2.4 percent a year in 1965 and has fallen to about 2.1 percent. However, in many developing countries, almost half the people are under 15 years of age, poised to enter their productive and reproductive years. The challenges to produce enough food for this growing population will remain great. Even more challenging is growing the food in the areas of greatest need. Presently, the world has great surpluses of food and fiber in some areas while there are devastating deficiencies in other areas. Economic conditions and the lack of suitable infrastructure for distribution all too often limit the alleviation of hunger, even when there are adequate supplies, sometimes even within the country itself. World hunger can only be solved in the long run by increasing crop production in the areas where the population is growing most rapidly. This will require increased efforts of both the developed and developing countries. Much of the technology that is so successful for crop production in the developed countries cannot be utilized directly in the developing countries. Many of the principles, however, can and must be adapted to the conditions, both physical and economic, of the developing countries. This series, *Advances in Soil Science*

Protein Therapeutics, Zuben E. Sauna, Chava Kimchi-Sarfaty, 2017-07-19. Medicinal chemistry is both science and art. The science of medicinal chemistry offers mankind one of its best hopes for improving the quality of life. The art of medicinal chemistry continues to challenge its practitioners with the need for both intuition and experience to discover new drugs. Hence, sharing the experience of drug research is uniquely beneficial to the field of medicinal chemistry. Drug research requires interdisciplinary team work at the interface between chemistry, biology, and medicine. Therefore, the topic-related series *Topics in Medicinal Chemistry* covers all relevant aspects of drug research, e.g., pathobiochemistry of diseases, identification and validation of emerging drug targets, structural biology, drugability of targets, drug design approaches, chemogenomics, synthetic chemistry including combinatorial methods, bioorganic chemistry, natural compounds, high-throughput screening, pharmacological in vitro and in vivo investigations, drug-receptor interactions on the molecular level.
