

STAR SYSTEM EXPLORATION

Prospectors are one of the greatest professions in the Lagrange era. They strive to explore the star system environment and have made significant contributions to the construction of the Lagrange Network.

We learned about your brilliant performance in the previous star system exploration. Here we send a formal invitation to you, hoping you can complete the exploration works of the mysteries of Capricornus 142 as Prospectors.

Bickel,Hendrik Kolvenbach,Philip Arm ,Gabriela Ligeza,2024-11-18 Sustainable exploration of the solar system requires a large amount of material and propellant to be transported out of Earth s gravity well and onwards to their destination Despite recent advances in lowering launch costs transferring material from Earth to space is still very costly It still amounts to several thousand to tens of thousands of Euros per kilogram to low earth orbit and transportation to the Moon and Mars even a

multiple of that There is an abundance of resources in our solar system that can be utilized to reduce the material required to be launched from Earth significantly Among these resources are water ice hydrates metals regolith rare earth elements chemical compounds volatiles and rare isotopes Utilizing these space resources would enable e g consumable and propellant production in space manufacturing or the construction of large structures which would otherwise be very expensive or not possible at all with material launched from Earth Lunar regolith for example contains iron and titanium that could be used to produce spacecraft components or structural elements for a lunar base while oxygen released from oxide minerals could be used for respiration or as a propellant In addition water ice could be extracted from regolith and used for consumption or agricultural applications Although there have been numerous missions to the Moon there are still a lot of unknowns concerning its surface making it difficult to know where to look for resources and how to extract them **Magnetism,**

Planetary Rotation, and Convection in the Solar System: Retrospect and Prospect W. O'Reilly, 2012-12-06 On the 6th 7th and 8th April 1983 a conference entitled Magnetism planetary rotation and convection in the Solar System was held in the School of Physics at the University of Newcastle upon Tyne The purpose of the meeting was to celebrate the 60th birthday of Prof Stanley Keith Runcorn and his and his students and associates several decades of scientific achievement The social programme which consisted of excursions in Northumberland and Durham with visits to ancient castles and churches to Hexham Abbey and Durham Cathedral and dinners in Newcastle and Durham was greatly enjoyed by those attending the meeting and by their guests The success of the scientific programme can be judged by this special edition of Geophysical Surveys which is derived mainly from the papers given at the meeting The story starts in the late 1940s when the question of the origin of the magnetic field of the Earth and such other heavenly bodies as had at that time been discovered as having a magnetic field was exercising the minds of several scientists notably P M S Blackett at Manchester W M Elsasser at the University of Pennsylvania and E C Bullard at Cambridge Two alternative mechanisms were proposed In one the magnetic field was in some way connected with the distributed angular momentum of a rotating body in the other electric currents in conducting parts within the body were proposed as the source of magnetic field Prospecting for Planets (videorecording).
