Prospects And Strategies For Nuclear Power Global Boon Or Dangerous Diversion:

Prospects and Strategies for Nuclear Power Peter Beck,1994 Examining the global strategic energy issues raised by the use of nuclear power this study argues that uncertainties about future electricity needs and constraints make the option of nuclear power a clear necessity However the author points out the problems posed by existing stockpiles of waste and plutonium as well as the dismantling of old power stations and states that a new generation of technologies must be produced to reduce these problems

Prospects and Strategies for Nuclear Power Peter W. Beck,1994 *Innovative Energy Strategies for CO2 Stabilization* Robert G. Watts,2002-07-11 The vast majority of the world s climate scientists believe that the build up of heat trapping CO2 in the atmosphere will lead to global warming unless we burn less fossil fuels At the same time energy must be supplied in increasing amounts for the developing world to continue its growth This book discusses the feasibility of increasingly efficient energy use and the potential for supplying energy from sources that do not introduce CO2 The book analyses the prospects for Earth based renewables solar wind biomass hydroelectricity geothermal and ocean energy It then discusses nuclear fission and fusion and the relatively new idea of harvesting solar energy on satellites or lunar bases It will be essential reading for all those interested in energy issues including engineers and physicists electrical mechanical chemical industrial environmental nuclear and industrial leaders and politicians It will also be used as a supplementary textbook on advanced courses on energy

Nuclear Or Not? D. Elliott,2016-01-18 With the nuclear issue back on the agenda worldwide this highly topical collection steers a path through the controversies presenting the views of proponents of nuclear expansion examining the challenges that face them and exploring the arguments of those who support alternative approaches

Technology for Global Economic and Environmental Survival and Prosperity Behram N. Kursunogammalu,Stephan L. Mintz,Arnold Perlmutter,2012-12-06 The 1996 Conference focused on topics of environmentally attractive technologies for electricity production renewables natural gas and nuclear energy Recent technology developments were addressed which include creation of more efficient photovoltaic convert ers for electricity generation the current and future role of natural gas in meeting global de mand for electric power generation and the status of nuclear energy its various applications and the prospects for its future The Conference agenda in light of its global economic im pact included comparative discussions of all the above alternative energy sources The re gional choice of energy sources and their impact on the global economy and environment was reviewed In addition to the above subjects but strongly connected with the theme of global en ergy needs and security the Conference program contained one session on new needs and di rections in higher education new curricula to cover fundamental global issues on energy resources and environment

Global Energy Perspectives Nebojsa Nakicenovic,Arnulf Grübler,Alan McDonald,1998-10-15 Global energy needs are expanding substantially as populations grow and economies develop around the world There is clear evidence that continued use of fossil fuels as the world s dominant energy supply is damaging the environment and causing changes in global climate

patterns People want higher levels of more efficient cleaner and less obtrusive energy services How much of those needs will be met by fossil fuels how much by alternative fuels and how much by efficiency increases and expanded energy conservation is a wide open question Global Energy Perspectives describes the results of a five year joint study by the International Institute for Applied systems Analysis and the World Energy Council It presents six long term energy futures which lay out the alternatives among future fuels technologies efficiency gains conservation patterns and pollution levels and pinpoints the key choices that are most likely to characterize the twenty first century The primary audience will include researchers educators policy makers in private and public sectors and other workers in the energy technology economics and environmental areas but the book will appeal to anyone interested in the future of energy production as a prerequisite for human development *Ibss: Political Science: 1994* British Library of Political and Economic Science at the London School of Economics,1995-12-08 The IBSS is the essential tool for librarians university departments research institutions and any public or private institution whose work requires access to up to date and comprehensive knowledge of the social sciences

Preparing the Ground for Renewal of Nuclear Power Behram N. Kursunogammalu,Stephan L. Mintz,Arnold Perlmutter,2012-12-06 This conference proceedings explores issues surrounding the replacement of existing nuclear power plants when they reach the end of their useful life Topics covered include Nuclear competitiveness regarding politics and power plant evolution social acceptance regarding communication information waste and safety proliferation and durability regarding resources and effects on the environment **Environmental Education and Information** ,1994

Bibliographie Mensuelle. School of Law,2006 **Journal of Scientific and Industrial Research** ,1994 **The Journal of Energy and Development** ,1996 *The New Geopolitics of Energy* John V. Mitchell,Peter Beck,Michael Grubb,1996 This path breaking study attempts to define a new international dimension to energy policy that takes account of the dramatic political changes since the oil crises of the 1970s This new geopolitics of energy is creative rather than defensive aligned to market oriented development rather than state management But governments have a role in promoting stable international conditions for trade and investment in energy which in turn contribute to wider political stability the development of more widely acceptable options for nuclear power coordinated international action to mitigate the risks of climate change and other environmental impacts This book is invaluable reading for executives and analysts in the energy business and for strategic thinkers who believe that broader policies should in keeping with current energy trends
