Power generation using fossil fuels industry and vehicles are responsible for the release of pollutants into the atmosphere
During the combustion process various pollutants such as fly ash sulphur oxides SO₂ and SO₃ nitrogen oxides NO_x NO₂ NO
and volatile organic compounds are emitted Radiation processing using electron beam accelerators has shown promising
results in treating this effluent Over the past few years radiation treatment techniques have been developed and deployed for
ensuring environmental safety from gaseous and liquid effluents It has been demonstrated that electron beam flue gas
treatment SO_x and NO_x removal wastewater purification and sludge hygienization can be effectively deployed The meeting

with direct experience in climate change related deliberations Confronting Climate Change is a survey of the best available

knowledge What are the most rewarding ways to respond The book begins by exploring the key linkages and feedbacks that
connect the risks of rapid climate change to other important environmental economic and political problems of our time
Recognizing persistent uncertainties in the scientific understanding of climate change the book draws attention to those
areas of research which may reveal surprises which could change the sense of political urgency surrounding the climate
problem as did the discovery of the Antarctic ozone hole It explores the geological record of climate change over the Earth's
history seeking a better understanding of how the climate has changed rapidly in countries while minimizing the long term
environmental damages which otherwise will result from continuing the current patterns of energy supply and use The book
is written to cross discipline boundaries so that policy makers economists scientists risk assessors environmentalists and
development advocates may understand each other's concerns It shows how the international debate on managing the risks
of rapid climate change may be re shaped for the benefit of people in every nation on the planet **Scientific and Technical**
