

The facts on PROSTATE CANCER

Prostate cancer is the **most common cancer** in Australian men with over **17,000** new cases every year.

THE RISKS OF PROSTATE CANCER

The causes of prostate cancer are unknown. Your risk of prostate cancer increases if:

You're aged 60 - 79

Your father or brother has had prostate cancer – your risk is twice that of other men

You have a strong family history of breast or ovarian cancer, particularly BRCA1 and BRCA2 gene mutations

SYMPTOMS OF PROSTATE CANCER

Early prostate cancer rarely causes symptoms. Even with advanced prostate cancer there may be no symptoms. Where symptoms do occur, they are often due to non-cancerous conditions, such as benign prostate hyperplasia (BPH).

Where symptoms of advanced prostate cancer are present they may include:

Feeling the frequent or sudden need to urinate

Pain in the lower back or pelvic area, or sciatica

Unexplained weight loss

These are not always a sign of prostate cancer, but you should speak with a doctor if you have any of these symptoms.

Prostate Cancer The Facts
