Protecting Biological Diversity Roles And Responsibilities:

Protecting Biological Diversity Gilles Seutin, Catherine Jeanne Potvin, Margaret Kraenzel, 2001 The most species rich regions of the globe the tropics are economically the poorest How can biologists work toward effective protection for endangered species in countries hungry for food and basic resources And why should local people in those countries trust the advice of scientists from wealthier countries who have broken their promises in the past and have typically shown little respect for the cultural values of others Catherine Potvin Margaret Kraenzel and Gilles Seutin asked scientists from developing countries to summarize their experiences of international collaboration and to suggest attitudes and practices that would lead to more fruitful exchanges with northern scientists They also asked scholars to provide an analytical framework in which these issues could be discussed and to identify possible solutions to questions such as What are the responsibilities of first world scientists involved in conservation actions in developing countries How can biologists work toward the protection of bio diversity while being respectful of the human desire for a better future The resulting papers analyse specific situations encountered in countries such as Democratic Republic of Congo Madagascar India and Panama and discuss the philosophical basis for environmental research They also examine the work of two institutions whose projects in developing countries have been particularly effective through outreach and attention to local values and needs and who propose a pluralistic view of conservation biology ethics Protecting Biodiversity seeks to encourage students and professionals involved in conservation projects to adopt culturally sensitive attitudes that will lead to greater effectiveness and efficiency in conservation and greater respect for the differences of others Contributors include H Baser Canadian International Development Agency Ottawa P Butler Rare Centre for Tropical Conservation Saint Lucia R Cansari McGill University A K Gupta Indian Institute of Management India M Martinez Velarde Universidad Santa Maria la Antigua Panama L Mubalama Institut congolais pour la conservation de la nature Zaire B J Norton School of Public Policy Atlanta L Packard Texas A M University M H Parizeau Universit Laval L H Rakotovo Centre national de recherche en environnement Madagascar V Regis Rare Centre for Tropical Conservation Saint Lucia P Weeks The Environmental Institute of Houston and G Wigley Ottawa

Margaret; Seutin Kraenzel (Gilles; Potvin, Catherine), 2013 **Protecting Biological Diversity** Carmen Richerzhagen, 2013-04-15 During the last ten years the enormous global loss of biodiversity has received remarkable attention Among the numerous approaches undertaken to stop or lessen this process access and benefit sharing ABS a

market based approach has emerged as among the most prominent In theory ABS turns biodiversity and genetic resources from an open access good to a private good and creates a market for genetic resources It internalizes the resources positive externalities by pricing the commercial values for research and development and makes users pay for it Users benefits are shared with the resource holders and set incentives for the sustainable use and the conservation of biodiversity Carmen Richerzhagen however finds that in practice there are significant questions about the effectiveness of the approach in the protection of biodiversity and about the fair and equitable sharing of benefits arising from the commercialization Utilizing the empirical findings of three case studies of biodiversity providing countries Costa Rica the Philippines and Ethiopia and one case study of a community of user countries the European Union EU Richerzhagen examines the effectiveness of ABS through the realization of its own objectives

Protection of the Environment and the Role of the United Nations Rajendra Ramlogan, 2022-11-12 This book provides a comprehensive review of the roles played by the various programmes autonomous organisations specialised agencies and departments of the United Nations in assisting the developing world in attaining environmental objectives It would be seen that almost all the various components of the United Nations have embraced environmental protection as part of their portfolios This indicates the growing investment by the United Nations in the environment particularly in developing countries The evidence would suggest that the absence of coordination and rationalisation of activities may undermine the ability of the United Nations to deliver effective and efficient environmental assistance to developing countries Ultimately this book proposes a drastic restructuring of the United Nations insofar as environmental matters are concerned hoping that scarce international funds will be well utilised and provide better money for value in environmental investment in developing countries

Governing Global Biodiversity Philippe G. Le Prestre, 2017-05-15 Predictions about the success of the Convention on Biological Diversity CBD are pessimistic It has now become commonplace to bemoan the scope ambition and deeply political nature of a convention that addresses issues ranging from ecosystems protection to the exploitation of genetic resources from conservation to justice and from commerce to scientific knowledge Ten years after its adoption how can we assess the difference that the CBD has made Is it in danger of collapsing under its own weight or is it building the foundations of new patterns of relations between societies and nature What achievements can we record and what challenges does it face In this book which is unique in its scope diversity and the

wealth of information it contains contributors from a variety of academic disciplines tackle an issue of enduring importance to the protection of biodiversity and enhance our understanding of humanity's capacity to reconcile its various aspirations and halt the destructive path upon which it is set **Protected Area Governance and Management** Graeme L.

Marine Protected Areas in International Law Ingvild Ulrikke Jakobsen, 2016-08-09 Marine Protected Areas in International law an Arctic perspective introduces and analyzes the legal rights and obligations of states under international law using Marine Protected Areas MPAs as a tool to protect marine biodiversity The fragile Arctic marine environment is under growing pressure from climate change and the prospect of increasing human activity affecting previously untouched areas The conservation of Arctic marine biodiversity is a pressing and global concern not least because the melting of sea ice will have widespread effects By analyzing regional cooperation through the OSPAR Convention and under the Arctic Council

Jakobsen examines the implementation of the global legal framework for biodiversity protection and conservation in the Arctic. The book has a particular focus on the possibilities of the states to regulate shipping within the MPAs as the increasing shipping activities represent a major threat to the sensitive marine Arctic.

The role of aquaculture in the implementation of the Convention on Biological Diversity's Kunming-Montreal Global Biodiversity Framework

Bowser, L.; Himes-Cornell, A.; Buonfrate, C.; Behar, I., This technical paper summarizes how the aquaculture sector contributes to the vision goals and targets of the Kunming Montreal Global Biodiversity Framework KMGBF with a view to ensuring that sustainable aquaculture systems and practices are not overlooked in efforts to achieve the KMGBF targets. It does so by illustrating a more nuanced and complex relationship between aquaculture and biodiversity than that which is often conveyed and understood in the public sphere. The paper then reviews the key risks to biodiversity from poor aquaculture practices and management as well as the key positive effects on biodiversity from sustainable aquaculture practices and management. These risks and positive effects demonstrate where aquaculture is most strongly linked to the KMGBF and help to identify areas where aquaculture promotes its goals and targets. Key principle of the KMGBF is the need for a whole of society and whole of government approach to its implementation. This document serves to inform, engage, encourage and empower stakeholders who are interested in advancing the sustainable use and conservation of biodiversity within aquatic systems. It aims to broaden the conversation on biodiversity to include sustainable use sectors that are not typically involved in this case aquaculture so they may be recognized as relevant and important to engage with. Importantly, this document refrains from endorsing any specific stance on the KMGBF recognizing that the diverse opportunities for action outlined across the KMGBF targets must be seen in context. Nevertheless, it intends to showcase that aquaculture particularly sustainable aquaculture possesses the potential to effect positive change.

The Laws Protecting Animals and Ecosystems

Paul A. Rees, 2017-11-29 There is currently no basic text in wildlife law suitable for the wide range of courses in wildlife conservation and animal welfare at both bachelors and masters level or for the large number of people who work in conservation and animal welfare. The Laws Protecting Animals and Ecosystems fills the gap in this significant market for a basic law text applicable to students and professionals whose primary training is in biology but who require a basic understanding of the laws relating to the protection of animals and ecosystems. The text is applicable to a wide range of subjects including wildlife conservation, animal handling, animal welfare, animal husbandry and veterinary science. This foundational text supports those studying animal and ecosystem law by providing an overview of the basic legal principles, national and international laws, terminology, the legal mechanisms used to protect animals and ecosystems and a compendium of the major animal welfare and conservation laws in major English speaking countries. Dr Rees has been teaching wildlife law for 20 years and ecology for over 35 years and is ideally placed to write this book.

The protective functions of forests in a changing climate - European experience Food and Agriculture Organization of the United Nations,2021-10-13 The objective of this publication is to present the policy and management approach of each member country on its protective forests The goal of the member countries is to increase the resilience of mountain forests and ensure the sustainability of their protective functions for society Each country report covers the following topics 1 definition of protective forests 2 characteristics of the national protective forest system 3 challenges encountered in the management and strengthening of protective forests including climate change impacts 4 governance of the protective forest system and 5 monitoring and planning systems for protective forests Countries have defined characterized and identified challenges inherent to their protective forests and it is through their appropriate governance management and planning that the forests are able to provide ecosystem services in a sustainable way In the context of a changing climate the approach has to be revisited and adapted to novel and increasingly more uncertain conditions This review of reports from 12 countries shows that especially mountain regions in Europe are facing common challenges and that different approaches can be learnt from each another We hope that this report may provide a basis for further actions in transboundary and international cooperation for maintaining and enhancing protective forests
