## Protein Structure And Protein Engineering Gesellschaft Fuer Biologische Chemie Colloquium:

*Protein Structure and Protein Engineering* Ernst-Ludwig Winnacker, Robert Huber, 2012-12-06 Protein engineering has had considerable impact on basic and applied research in biochemistry and molecular biology. It is already in use as a tool in molecular biology but it is beginning to strongly influence the planning of experiments in biology everywhere and with even further reaching consequences the appointment politics in research institutions and industries. Protein engineering perhaps more than any other methods of protein analysis and peptide synthesis has shown that proteins are organic molecules governed by the universal laws of chemistry and physics. However as was the case with other new powerful methods and techniques protein engineering tempts to an exploration of its limitations and thus generates more questions than it answers. The 39th Mosbacher Colloquium on Protein Structure and Protein Engineering is not the first conference on this topic and it will not be the last. The important issues are obviously techniques of protein engineering, examples of application and the basic framework of protein structure and stability within which reasonable experiments can be designed. Conversely also what we can learn about protein structure dynamics and folding from such experiments. Experiments in this direction aim at elucidating the folding code in the long run but help to exploit the role of individual amino acid residues in catalysis, protein stability and binding specificity in selected proteins now.

Integration and Excision of DNA Molecules P.H. Hofschneider,P. Starlinger,2012-12-06 The topic of this years osbach Colloquium was DNA integration We have tried to bring together experts from different fields of research who are studying natural processes by which DNA molecules from different sources are linked It has been known for a long time that such linkage occurs between the chromosomes of bacteriophages and plasmids on the one hand and the chromosome of the bacterial host on the other This process has been especially well studied in bacteriophage A Since it is controlled in a complicated way we began with a lecture by M Ptashne on these regulatory processes H Nash described the integration of bacteriophage A into the bacterial chromosome To put this site specific process into perspective G Mosig lectured on genetic recombination in prokaryotes in general and K Murray described the use of bacteriophage A as an artificial vector for genetic engineering A different kind of bacteriophage integration is shown by bacteriophage Mu which is much less specific in its choice of an integration site than A The properties of this phage were described by P van de Putte     **Index of Conference Proceedings Received, 1974-1978** British Library.
