Protein Stability and Stabilization Through Protein Engineering Yoshiaki Nosoh, Takeshi Sekiguchi, 1991

Stability and Stabilization of Biocatalysts F.J. Plou, J.L. Iborra, P.J. Halling, 1998-11-10 Six years after the symposium on Stability and Stabilization of Enzymes a second symposium Stability and Stabilization of Biocatalysts on which this book is based was organized At the symposium 210 participants representing all continents came together to learn from 150 oral and poster communications The volume brings up to date the work already going on and identifies possible breakthroughs in the research This timely book therefore presents cutting edge developments in topics such as non covalent processes in solution protein engineering and thermophile enzymes immobilized enzymes non conventional media and whole cells An excellent addition to the available literature it will make a useful contribution to this key area of applied biocatalysis *Protein Engineering For Industrial Biotechnology* Lilia Alberghina, 2000-01-10 Protein engineering has proved to be one of the more fruitful technological approaches in biotechnology being both very powerful and able to generate valuable intellectual property This book aims to present examples in which the application of protein engineering has successfully solved problems arising in industrial biotechnology There is a sec Stability and Stabilization of Enzymes W.J.J. van den Tweel, A. Harder, R.M. Buitelaar, 2013-10-22 These proceedings contain most of the oral presentations and posters of the international symposium on Stability and Stabilization of Enzymes held in Maastricht in November 1992 They provide a comprehensive overview of the state of the art in this field The possible applications of enzymes are enormous Years of development have seen many enzymes brought onto the market but they are still expensive to use Therefore their efficient application is a prerequisite for common usage One of the main factors for this efficiency is the stability of the enzymes The topics thus ranged from the extensive fundamental thermodynamic knowledge gathered in academic research to the practical applied knowledge built up in industry during the time that enzymes have been produced commercially The subject Stability and Stabilization of Enzymes was discussed from various points of view as was reflected in the themes of the symposium sessions In the session on Fundamentals of Enzyme Stabilisation the thermodynamic background of the phenomenon was highlighted In yet another session the recently developed analytical tools to measure enzyme stability and stabilisation were discussed Further sessions comprised the physical chemical and biological ways to obtain enzyme stabilisation and finally the industrial practice of enzyme stabilisation was treated by representatives of the world s most important enzyme producers The book will be of interest to researchers in universities and industry in the fields of biochemistry enzymology and biotechnology

Stabilizing Protein Function Ciarán ÓFágáin, 1997-10-17 This book provides an account of our current knowledge of protein stability It demonstrates how an understanding of protein stability has emerged from investigations of protein denaturation inactivation and from studies on stabilizing interactions in proteins It also describes the stability characteristics of enzymes in nonaqueous media and the special adaptations of thermophilic proteins Manipulation of protein stability is

outlined in chapters on the use of additives chemical modification of proteins in solution immobilization protein engineering and long term storage of proteins The book includes numerous case studies and copious references to original research papers and relevant reviews and monographs
