Science at the Frontier National Academy of Sciences, Addison Greenwood, 1992-02-01 *Science at the Frontier* takes you on a journey through the minds of some of the nation's leading young scientists as they explore the most exciting areas of discovery today Based on the second Frontiers of Science symposium sponsored by the National Academy of Sciences this book describes recent accomplishments and new directions in ten basic fields represented by outstanding scientists

convening to discuss their research. It captures the excitement and personal quality of these exchanges, sometimes pointing to surprising connections spanning the boundaries of traditional disciplines while providing a context for the reader that explains the basic scientific framework for the fields under discussion. The volume explores new modifications to scientific theory as geologists probe deep inside the earth and astrophysicists reach to the limits of the observable universe for answers to some of nature's most fundamental and vexing questions. The influence of research in smog formation on the public debate about how to effectively control air pollution. The increasing use of computer modeling in science from describing the evolution of cellular automata to revealing the workings of the human brain via neural networks. The rise of dynamical systems, the study of chaotic behavior in nature to a full-fledged science. The search to understand the regulation of gene activity and the many biological problems such as the onset of cancer to which it applies. Recent progress in the quest to transform what we know about photosynthesis into functional efficient systems to tap the sun's energy. Current developments in magnetic resonance imaging and its promise for new breakthroughs in medical diagnosis. Throughout this work, the reader is witness to scientific discovery and debate centered on such common concerns as the dramatic and transforming effect of computers on scientists' thinking and research, the development of more cross-disciplinary perspectives, and the very nature of the scientific enterprise itself: what it is to be part of it and its significance for society. Science at the Frontier is must reading for informed lay readers, scientists interested in fields other than their own, and science students considering a future specialization.

Living and Working on the New Frontier, 1994 Origin of Life via Archaea
Richard Gordon, 2024-08-26. This book surveys the models for the origin of life and presents a new model starting with shaped droplets and ending with life as polygonal Archaea. It collects the most published micrographs of Archaea discovered only in 1977 which support this conclusion and thus provides the first visual survey of Archaea. Origin of Life via Archaea's purpose is to add a new hypothesis on what are called shaped droplets as the starting point for flat polygonal Archaea supporting the Vesicles First hypothesis. The book contains over 6000 distinct references and micrographs of 440 extant species of Archaea, 41% of which exhibit polygonal phenotypes. It surveys the intellectual battleground of the many ideas of the origin of life on earth: chemical equilibrium, autocatalysis, and biotic polymers. This book contains 17 chapters, some coauthored, on a wide range of topics on the origin of life including Archaea's origin, patterns, and species. It shows how various aspects of the origin of life may have occurred at chemical equilibrium, not requiring an energy source, contrary to the general assumption. For the reader's value, its compendium of Archaea micrographs might also serve many other interesting questions about Archaea. One chapter presents a theory for the shape of flat polygonal Archaea in terms of the energetics at the surface edges and corners of the S layer. Another shows how membrane peptides may have originated. The book also includes a large table of most extant Archaea that is searchable in the electronic version. It ends with a chapter on problems needing further research.

Audience: This book will be used by astrobiologists, origin of life biologists, physicists of small systems, geologists, biochemists.
