Protooncogenes and Growth Factors in Steroid Hormone Induced Growth and Differentiation Sohaib A. Khan, George M. Stancel, 1993-12-17 *Protooncogenes and Growth Factors in Steroid Hormone Induced Growth and Differentiation* reviews current information regarding the complex nature of hormone induced cell growth and differentiation The contributors examine the emerging consensus that protooncogenes and growth factors mediate perhaps the most crucial steps leading to cell growth and differentiation The primary objective of this book is to unite the status of current research related to protooncogenes and growth factors from diverse physiological systems to help readers gain a comprehensive understanding of the subject Leading researchers have contributed outstanding chapters pertaining to steroid hormone regulated cell growth and differentiation in normal and or neoplastic tissues This book will appeal to basic science researchers clinicians industrial researchers and graduate students

Hormones and Reproduction of Vertebrates, Volume 3 David O. Norris, Kristin H. Lopez, 2011-05-04 This series of volumes represents a comprehensive and integrated treatment of reproduction in vertebrates from fishes of all sorts through mammals It is designed to provide a readable coordinated description of reproductive basics in each group of vertebrates as well as an introduction to the latest trends in reproductive research and our understanding of reproductive events Whereas each chapter and each volume is intended to stand alone as a review of that topic or vertebrate group respectively the volumes are prepared so as to provide a thorough topical treatment across the vertebrates Terminology has been standardized across the volumes to reduce confusion where multiple names exist in the literature and a comprehensive glossary of these terms and their alternative names is provided A complete essential and up to date reference for research scientists working on vertebrate hormones and reproduction and on animals as models in human reproductive research Covers the endocrinology neuroendocrinology physiology behaviour and anatomy of vertebrate reproduction Structured coverage of the major themes for all five vertebrate groups allows a consistent treatment for all Special chapters elaborate on features specific to individual vertebrate groups and to comparative aspects similarities and differences between them

Mammary Tumor Cell Cycle, Differentiation, and Metastasis Robert B. Dickson, Marc E. Lippman, 2012-12-06 *Mammary Tumor Cell Cycle Differentiation and Metastasis* is the fifth volume since 1988 in a series designed to broadly examine current advances in the cellular and molecular biology of breast cancer As in previous volumes the editors have invited recognized experts in cutting edge topics to provide a chapter focused on their area of research The editors have turned to the researchers who study rodent models of the disease and to those who study the cellular and molecular basis of human breast cancer The first section of the book is devoted to new mouse models of mammary development and tumorigenesis The second section moves to studies of human breast cancer and focuses on receptors signalling and the cell cycle The final section deals with defective tissue interactions in human breast cancer We are now in a period of extremely rapid accumulation of data on the molecular and cellular biology of breast cancer These

findings are highlighted in chapters from Mammary Tumor Cell Cycle Differentiation and Metastasis Advances in Cellular and Molecular Biology of Breast Cancer Hormones and Reproduction of Vertebrates David O. Norris, Kristin H. Lopez, 2010-11-25 This series of volumes represents a comprehensive and integrated treatment of reproduction in vertebrates from fishes of all sorts through mammals It is designed to provide a readable coordinated description of reproductive basics in each group of vertebrates as well as an introduction to the latest trends in reproductive research and our understanding of reproductive events Whereas each chapter and each volume is intended to stand alone as a review of that topic or vertebrate group respectively the volumes are prepared so as to provide a thorough topical treatment across the vertebrates Terminology has been standardized across the volumes to reduce confusion where multiple names exist in the literature and a comprehensive glossary of these terms and their alternative names is provided A complete essential and up to date reference for research scientists working on vertebrate hormones and reproduction and on animals as models in human reproductive research Covers the endocrinology neuroendocrinology physiology behaviour and anatomy of vertebrate reproduction Structured coverage of the major themes for all five vertebrate groups allows a consistent treatment for all Special chapters elaborate on features specific to individual vertebrate groups and to comparative aspects similarities and differences between them *Endocrinology of Pregnancy* Fuller W. Bazer, 2012-12-06 A comprehensive cutting edge review of the complex interactions between maternal and fetal placental tissues that control the establishment and maintenance of pregnancy the proper development of the fetus the birth process and the behavioral aspects of bonding between mother and newborn Expert researchers review the endocrine and physiological events that culminate in the delivery of offspring and provide a solid base of comparative information on the menstrual cycle of primates including humans They also discuss the sources and functions of both steroid and protein hormones from the placenta and the details of their effects on uterine function placental development fetal growth and well being and maternal responses to pregnancy This book will become the standard reference source not only for reproductive scientists but also for those clinicians who want better to understand the complex factors that affect pregnancy and their pregnant patients *Estrogens, Progestins, and Their Antagonists* Edward J. Pavlik, 2012-11-19 These two volumes on Estrogens Progestins and Their Antagonists represent a thematic extension of the series Hormones in Health and Disease The first publication in the series Steroid Hormone Receptors Basic and Clinical Aspects focused on recent advances in the anatomy of steroid receptors and members of the steroid receptor superfamily Consistent with the spirit of the series the authors addressed issues of clinical significance of steroid receptor detection in hormone related disorders The second volume in the series Hormones and Cancer attempted a more direct examination of actions of hormones in cancerous tissues and cells In these two volumes which together form the third in the series the editor Dr Edward Pavlik has introduced a team of leading investigators engaged in research on various aspects of the steroids that regulate female reproductive physiology Estrogens and progestins the main components of the most widely used

contraceptive pills have found a variety of uses in clinical endocrinology. These volumes contain discussions that range from the introduction of novel hormonal ligands to hormonal antagonism by steroid analogs. A balanced treatment is provided of applications of the steroids in treatment and management of hormone dependent conditions and malignancies. The remarkable synthesis of literature contained in this volume will provide a reader with both the fundamental concepts underlying steroid hormone physiology and the clinical applications of observations made on basic aspects of hormone action. I congratulate the editorial leadership of Dr *The Endometrium* John D. Aplin, Asgerally T Fazleabas, Stanley R Glasser, Linda C Giudice, 2008-04-07. The first edition of *The Endometrium* was a landmark publishing event in reproductive biology and medicine. Many important developments have occurred in the field and this new edition has been substantially updated and expanded to include new topics with an improved format. With the addition of several new authors and topics the Second Edition of *Etiology of Breast and Gynecological Cancers* C. Marcelo Aldaz, 1997-03-21. Progress in Clinical and Biological Research Volume 396. *Etiology of Breast and Gynecological Cancers* Proceedings of the Ninth International Conference on Carcinogenesis and Risk Assessment Held in Austin Texas November 29 December 2 1995. C Marcelo Aldaz Michael N Gould John McLachlan and Thomas J Slaga Editors. Accounting for 150 cancers per 100 000 people at risk breast cancer and gynecological cancer together constitute a major public health concern. These cancers have a common target population and many also have common etiological features including hormonal factors genetic changes in genes such as BRCA1 and environmental factors such as ionizing radiation viruses chemical xenobiotics diet and nutrition. *Etiology of Breast and Gynecological Cancers* explores important environmental and genetic factors that are key to the induction of these cancers. The book takes a broad perspective with chapters contributed by laboratory investigators and clinicians as well as by epidemiologists. It emphasizes validation and issues of extrapolation from animal models to humans and their impact on risk assessment and it also discusses intervention strategies in terms of chemoprevention which has the potential to reduce the morbidity and mortality from these cancers in women. *Etiology of Breast and Gynecological Cancers* explores a wide variety of topics including recent advances in the molecular genetics of hereditary breast and ovarian cancer molecular perspectives on cancer the cell cycle and the inherited disorder ataxia telangiectasia genotoxicity of environmental agents in human mammary epithelial cells rodent model of reproductive tract leiomyomata estrogens and the genetic control of tumor growth. Featuring 19 outstanding presentations from leading researchers in an array of disciplines *Etiology of Breast and Gynecological Cancers* is an important resource for investigators and clinicians in oncology epidemiology and public health providing new understanding of the sources of these disorders as well as new directions for treatment and prevention.

Hormonal Carcinogenesis III Jonathan J. Li, Sara A. Li, Janet R. Daling, 2012-12-06. Since our previous symposium in 1995 the pace of research in hormones and cancer has accelerated. Progress in our understanding of hormonal carcinogenic processes has been a direct result of the advances made in cell biology endocrinology and carcinogenesis at the molecular

level The newer fields of molecular genetics and cytogenetics already have and are expected to continue to play a major role in furthering our understanding of the cellular and molecular events in hormonal carcinogenesis It has become increasingly clear that the risk of naturally occurring sex hormones in carcinogenic processes both in human and in animal models requires only minute quantities of hormones at both the serum and tissue levels Moreover hormone target tissues for neoplastic transformation perhaps with the exception of the liver generally have relatively modest ability to metabolize sex hormones such as the breast and prostate Table 1 summarizes the serum and in most cases the tissue levels of sex hormones both endogenously and exogenously ingested which are associated with increased risk for endocrine associated cancers such as breast endometrium and prostate as well as the hormone levels of four experimental models that have been shown to elicit high tumor incidences In contrast to the human in which the hormone levels are cyclic however the latter require continuous hormone exposure at these relatively low levels

Hormones and Signaling Lutz Birnbaumer, James Darnell, Ronald Evans, Tony Hunter, Anthony R. Means, Vale Wylie, 1997-11-14 Hormones and Signaling focuses on the mechanism of gene regulation at the cellular level It also covers the way hormones act to modulate gene regulation and animal development Includes information on Nuclear receptors coactivators and corepressors Membrane receptors kinases and phosphorylation on cascades Hormonal regulation of development Calcium channels and neurotransmitters Chromatin transcription factors and regulation of gene expression JAK STAT pathways Hormone regulated development and gene knock out The Endometrium Stanley R. Glasser, John D. Aplin, Linda C. Giudice, Siamak Tabibzadeh, 2002-05-16 The Endometrium is devoted to a comprehensive multi disciplinary account of the uterine endometrium This book is the first to define the regulatory biological interrelationships between epithelial and stromal cell phenotypes endothelial cells extracellular matrix and immunobiological elements It highlights their relevance to clinical conditions *Estrogens in the Environment, III*, 1993
