

The Prototype

PRE-RESCUE FORM NOTES:

- Elliot Ludwig is the Prototype in this AU. His body became unrecognizable.
- Added the bodies of both toys and workers alike to his own, obtaining their memories in the process.
- Toy bodies include Daddy Long Legs, Cassie Cutie-a-Pillar, Daisy, the bigger version of yellow mini huggy, and the mini kissy missies.
- Hides in the deepest parts of the factory, not showing himself to others. Catnap is an exception to this rule.
- As the years went by, the Prototype slowly distanced himself from other toys. This is due to guilt for trapping everyone in this situation.
- Can control all the extra body parts, toys and humans alike.
- Only Catnap knows he hallucinates.
- His ultimate plan is to kill everyone inside PlayCo, thus "freeing" them.

The Optimal Design of Blocked and Split-Plot Experiments Peter Goos, 2012-12-06 This book provides a comprehensive treatment of the design of blocked and split plot experiments The optimal design approach advocated in the book will help applied statisticians from industry medicine agriculture chemistry and many other fields of study in setting up tailor made experiments The book also contains a theoretical background a thorough review of the recent work in the area of blocked and split plot experiments and a number of interesting theoretical results

What Makes a Good Experiment? Allan Franklin, 2016-09-07 What makes a good experiment Although experimental evidence plays an essential role in science as Franklin argues there is no algorithm or simple set of criteria for ranking or evaluating good experiments and therefore no definitive answer to the question Experiments can in fact be good in any number of ways conceptually good methodologically good technically good and pedagogically important And perfection is not a requirement even experiments with incorrect results can be good though they must he argues be methodologically good providing good reasons for belief in their results Franklin revisits the same important question he posed in his 1981 article in the British Journal for the Philosophy of Science when it was generally believed that the only significant role of experiment in science was to test theories But experiments can actually play a lot of different roles in science they can for example investigate a subject for which a theory does not exist help to articulate an existing theory call for a new theory or correct incorrect or misinterpreted results This book provides details of good experiments with examples from physics and biology illustrating the various ways they can be good and the different roles they can play

Søren Bisgaard's Contributions To Quality Engineering Ronald J.M.M. Does, Roger W. Hoerl, Murat Kulahci, G. Geoffrey Vining, 2017-05-03 S ren Bisgaard was an extremely productive and insightful scholar of modern industrial statistics and quality engineering He was amazing for both his breadth of interests and the depth of his scholarship S ren was one of the very few people making substantial contributions in so many basic areas in statistics and quality engineering This compilation collects 31 of his works and is divided into four broad areas Design and Analysis of Experiments Time Series Analysis The Quality Profession Healthcare Engineering This book provides a comprehensive coverage of essential statistical methods for the 2k p factorial system and shows the basic principles of time series analysis through examples Furthermore this book presents the connection between the application of the scientific method and quality improvement and it points out the importance of quality improvement to tangible financial results Finally this book explains the seemingly paradoxical idea that we can enhance quality while reducing cost of healthcare

The Big Book of Concepts Gregory Murphy, 2004-01-30 Concepts embody our knowledge of the kinds of things there are in the world Tying our past experiences to our present interactions with the environment they enable us to recognize and understand new objects and events Concepts are also relevant to understanding domains such as social situations personality types and even artistic styles Yet like other phenomenologically simple cognitive processes such as walking or understanding speech concept

formation and use are maddeningly complex Research since the 1970s and the decline of the classical view of concepts have greatly illuminated the psychology of concepts But persistent theoretical disputes have sometimes obscured this progress The Big Book of Concepts goes beyond those disputes to reveal the advances that have been made focusing on the major empirical discoveries By reviewing and evaluating research on diverse topics such as category learning word meaning conceptual development in infants and children and the basic level of categorization the book develops a much broader range of criteria than is usual for evaluating theories of concepts The Shock and Vibration Bulletin ,1968 **Hearings** United States. Computational, Geometric, and Process Perspectives on Facial Cognition Michael J. Wenger,James T. Townsend,2005-04-11 Within the last three decades interest in the psychological experience of human faces has drawn together cognitive science researchers from diverse backgrounds Computer scientists talk to neural scientists who draw on the work of mathematicians who explicitly influence those conducting behavioral experiments The chapters in this volume illustrate the breadth of the research on facial perception and memory with the emphasis being on mathematical and computational approaches In pulling together these chapters the editors sought to do much more than illustrate breadth They endeavored as well to illustrate the synergies and tensions that inevitably result from adopting a broad view one consistent with the emerging discipline of cognitive science **Beam Test Calorimeter Prototypes for the CMS**

Calorimeter Endcap Upgrade Thorben Quast,2022-01-24 In order to cope with the increased radiation level and the challenging pile up conditions at High Luminosity LHC the CMS collaboration will replace its current calorimeter endcaps with the High Granularity Calorimeter HGCal in the mid 2020s This dissertation addresses two important topics related to the preparation of the HGCal upgrade experimental validation of its silicon based design and fast simulation of its data Beam tests at the DESY Hamburg and the CERN SPS beam test facilities in 2018 have been the basis for the design validation The associated experimental infrastructure the algorithms deployed in the reconstruction of the recorded data as well as the respective analyses are reported in this thesis First core components of the silicon based prototype modules are characterised and it is demonstrated that the assembled modules are functional In particular their efficiency to detect minimum ionising particles MIPs traversing the silicon sensors is found to be more than 98% for most of the modules No indication of charge sharing between the silicon pads is observed Subsequently the energy response is calibrated in situ

using the beam test data Equalisation of the different responses among the readout channels is achieved with MIPs hereby deploying the HGCal prototype as a MIP tracking device The relative variation of the inferred calibration constants amounts to 3% for channels on the same readout chip The calibration of the time of arrival information is performed with an external time reference detector With it timing resolutions of single cells including the full prototype readout chain around 60ps in the asymptotic high energy limit are obtained The calorimetric performance of the HGCal prototype is validated with particle showers induced by incident positrons and charged pions For electromagnetic showers the constant term in the relative energy resolution is measured to be 0.52 ± 0.08 % whereas the stochastic term amounts to 22.2 ± 0.3 % GeV This result is in good agreement with the calorimeter simulation with GEANT4 The prototype's positioning resolution of the shower axis after subtracting the contribution from the delay wire chambers in the beam line used as reference is found to be below 0.4 mm at 300 GeV At the same energy the angular resolution in the reconstruction of the electromagnetic shower axis in this prototype is measured to be less than 5mrad The analysis of the hadronic showers in this thesis makes use of state of the art machine learning methods that exploit the calorimeter's granularity It is indicated that the energy resolution may be improved using software compensation and also that the separation of electromagnetic and charged pion induced showers in the calorimeter may benefit from such methods The measurements of the hadronic showers are adequately reproduced by GEANT4 simulation Altogether the obtained results from the analysis of the beam test data in this thesis are in agreement with the full functionality of the silicon based HGCal design The final part of this thesis provides a proof of principle that generative modelling based on deep neural networks in conjunction with the Wasserstein distance is a suitable approach for the fast simulation of HGCal data Instead of sequential simulation a deep neural network based generative model generates all calorimeter energy depositions simultaneously This generator network is optimised through an adversarial training process using a critic network guided by the Wasserstein distance The developed framework in this thesis is applied to both GEANT4 simulated electromagnetic showers and to positron data from the beam tests Ultimately this fast simulation approach is up to four orders of magnitude faster than sequential simulation with GEANT4 It is able to produce realistic calorimeter energy depositions from electromagnetic showers incorporating their fluctuations and correlations when converted into typical calorimeter observables
