[The Psychology of School Climate](#) Garry Wade McGiboney,2016-06-22 Many people have become impatient with school reform and school improvement efforts that fail to include school climate The importance of a positive school climate is emerging in current research not only as an essential component of school reform and school improvement but also as a necessary framework for maintaining excellent schools and providing healthy and safe schools for all students Research strongly suggests that educators and policy makers have a lot to learn about the importance of school climate for school safety and academic success With the growing body of research regarding school climate it is important to study the research and understand how the psychology of school climate and how the elements of school climate can be viewed from a population based perspective as well as understanding the impact of school climate on individual students This review of school climate research includes hundreds of articles and research papers of different perspectives from around the world in numerous cultures School climate is becoming a science of education and psychology that must be studied further in order to understand the dynamic nature of learning environments to identify elements that support or threaten the learning environment and to learn how to improve the conditions for learning in all schools

*The Market Mind Hypothesis* Patrick Schotanus,2023-10-04 What is economics missing link Recent economic crises have had a devastating impact on society

Worryingly they gravely risked a collapse of the financial system These crises also painfully revealed economics blind spots Crucially economics is not an innocent bystander but central to the problem In this pioneering book Patrick Schotanus explains that economics mechanical worldview is the ontological error which leads to flawed thinking and faulty practices The Market Mind Hypothesis MMH thus calls it mechanical economics it not only erroneously views but also dangerously treats the economy as a machine the market as an automaton and its agents as robots Inspired by heterodox economic and leading cognitive thinkers this book offers an alternative paradigm Central to MMH s psychophysical worldview is the fact that consumers investors and other participants are conscious beings and that their minds extension makes consciousness a reality in markets exemplified by market mood Specifically denial of the complex mind matter exchanges as the essence of markets means the extended mind body problem is economics elephant in the room The book argues that if mechanical economics is the answer we have been asking the wrong questions Moreover we will not solve our economic predicaments by doubling down on the assumption of rationality nor by identifying yet another behavioural bias Instead scholars and students of economics and finance as well as finance practitioners need to investigate through cognitive economics the deep links between markets and minds to better understand both With a foreword by investment strategist Russell Napier an intermezzo by neuroscientist and complexity pioneer Scott Kelso and an afterword by 4E cognition philosopher Julian Kiverstein
