Textbook of Women's Reproductive Mental Health Lucy A. Hutner, M.D., Lisa A. Catapano, M.D., Ph.D., Sarah M. Nagle-Yang, M.D., Katherine E. Williams, M.D., Lauren M. Osborne, M.D., 2021-12-07 More women 47.6% receive mental health services compared with men 34.8% Women are twice as likely as men to develop major depressive disorder Furthermore 10% 15% of women experience depression during the perinatal period which makes depression one of the most common complications of childbirth Gaynes et al 2005 These statistics illustrate that psychiatric disorders in women are common during the reproductive years and that the hormonal fluctuations associated with the reproductive life cycle contribute to the etiology of mental illness in women Medical practitioners in all fields will encounter female patients with mental illness across the lifespan particularly major depressive and anxiety disorders Consequently there is a great imperative for high quality educational materials that increase the competency of providers This outstanding work is divided into two parts Part I provides a comprehensive overview of the reproductive life cycle and covers mental health concerns across the lifespan including the relationship between gynecological and sexual health and mental health as well as infertility the premenstrual period and perimenopause Part II is devoted to the perinatal period and offers a conceptual framework for a clinical approach to the pregnant and postpartum patient followed by evidence based reviews of the management of psychiatric disorders by diagnostic category as well as covering stress in pregnancy infant mental health and legal forensic issues Critical summaries of the epidemiology risk factors screening methods and clinical features are presented This book must be required reading for all faculty and trainees who will care for women
