

The background of the slide is a photograph of an open book, likely a Bible, with its pages slightly aged and yellowed. The book is open to a section with text, but the text is out of focus. A dark, semi-transparent rectangular overlay is positioned in the upper half of the image, containing the title and subtitle in white text. The overall lighting is warm and soft, creating a contemplative atmosphere.

Seybold,2016-04-15 In the 1990s great strides were taken in clarifying how the brain is involved in behaviors that in the past had seldom been studied by neuroscientists or psychologists This book explores the progress begun during that momentous decade in understanding why we behave think and feel the way we do especially in those areas that interface with religion What is happening in the brain when we have a religious experience Is the soul a product of the mind which is in turn a product of the brain If so what are the implications for the Christian belief in an afterlife If God created humans for the purpose of having a relationship with him should we expect to find that our spirituality is a biologically evolved human trait What effect might a disease such as Alzheimer s have on a person s spirituality and relationship with God Neuroscience and psychology are providing information relevant to each of these questions and many Christians are worried that their religious beliefs are being threatened by this research Kevin Seybold attempts to put their concerns to rest by presenting some of the scientific findings coming from these disciplines in a way that is understandable yet non threatening to Christian belief The Two Faces of Religion N.
