Channels, Carriers, and Pumps Wilfred D. Stein, Thomas Litman, 2014-12-09 An introduction to the principles of membrane transport How molecules and ions move across the cell membrane by simple diffusion and by making use of specialized membrane components channels carriers and pumps The text emphasizes the quantitative aspects of such movement and its interpretation in terms of

transport kinetics Molecular studies of channels carriers and pumps are described in detail as well as structural principles and the fundamental similarities between the various transporters and their evolutionary interrelationships The regulation of transporters and their role in health and disease are also considered Provides an introduction to the properties of transport proteins channels carriers and pumps Presents up to date information on the structure of transport proteins and on their function and regulation Includes introductions to transport kinetics and to the cloning of genes that code transport proteins Furnishes a link between the experimental basis of the subject and theoretical model building Pumps, Channels and Transporters Ronald J. Clarke, Mohammed A. A. Khalid, 2015-09-16 Describes experimental methods for investigating the function of pumps channels and transporters Covers new emerging analytical methods used to study ion transport membrane proteins such as single molecule spectroscopy Details a wide range of electrophysiological techniques and spectroscopic methods used to analyze the function of ion channels ion pumps and transporters Covers state of the art analytical methods to study ion pumps channels and transporters and where analytical chemistry can make further contributions **Molecular Biology of Receptors and Transporters: Pumps, Transporters and Channels**, 1993-05-11 This multi volume set within International Review of Cytology encompasses the recent advances in the understanding of structure function relationships at the molecular level of receptors transporters and membrane proteins Several diverse families of membrane receptor proteins are discussed with respect to the molecular and cellular biology of their synthesis assembly turnover and function Included are such receptor superfamilies as G proteins immunoglobulins ligand gated receptors interleukins and tyrosine kinases as well as such transporter protein families as pumps ion channels and bacterial transporters Each section of each volume features a perspectives commentary chapter which includes comments on the recent advances and predictions on new directions Written by acknowledged experts in the field this volume 137C highlights recent developments in pumps channels and transporters The latest on several important protein families including The G protein coupled receptors The interleukin receptors Sugar transporters Several ion channels and pumps Pumps, Transporters, and Ion Channels Francisco Sepulveda, Francisco Bezanilla, 2005-01-11 *Cytokine-Ion Channel Interactions in Pulmonary Inflammation* István Vadász, Rudolf Lucas, 2019-01-24 This Research Topic assembles original contributions and reviews from an international consortium of PIs related to interactions between pro inflammatory cytokines and ion channels during acute lung injury and chronic heart failure **Salinity Tolerance in Plants: Mechanisms and Regulation of Ion Transport** Vadim Volkov, Mary J. Beilby, 2018-01-12 Life presumably arose in the primeval oceans with similar or even greater salinity than the present ocean so the ancient cells were designed to withstand salinity However the immediate ancestors of land plants most likely lived in fresh or slightly brackish water The fresh brackish water origins might explain why many land plants including some cereals can withstand moderate salinity but only 1 2 % of all the higher plant species were able to re discover their saline origins again and survive at increased salinities close to that of seawater From a practical side salinity is

among the major threats to agriculture having been one of the reasons for the demise of the ancient Mesopotamian Sumer civilisation and in the present time causing huge annual economic losses of over 10 billion USD The effects of salinity on plants include osmotic stress disruption of membrane ion transport direct toxicity of high cytoplasmic concentrations of sodium and chloride on cellular processes and induced oxidative stress Ion transport is the crucial starting point that determines salinity tolerance in plants Transport via membranes is mediated mostly by the ion channels and transporters which ensure selective passage of specific ions The molecular and structural diversity of these ion channels and transporters is amazing Obtaining the detailed descriptions of distinct ion channels and transporters present in halophytes marine algae and salt tolerant fungi and then progressing to the cellular and the whole organism mechanisms is one of the logical ways to understand high salinity tolerance Transfer of the genes from halophytes to agricultural crops is a means to increase salt tolerance of the crops The theoretical scientific approaches involve protein chemistry structure function relations of membrane proteins synthetic biology systems biology and physiology of stress and ion homeostasis At the time of compiling this e book many aspects of ion transport under salinity stress are not yet well understood The e book has attracted researchers in ion transport and salinity tolerance We have combined our efforts to achieve a wider more detailed understanding of salt tolerance in plants mediated by ion transport to understand present and future ways to modify and manipulate ion transport and salinity tolerance and also to find natural limits for the modifications

Plant Nutrition Walter Horst, M.K. Schenk, A. Bürkert, N. Claassen, H. Flessa, W.B. Frommer, Heiner E. Goldbach, H.-W. Olf, V. Römheld, B. Sattelmacher, U. Schmidhalter, S. Schubert, N. von Wirén, L. Wittenmayer, 2006-05-18 The world's population is expected to reach 8 billion by 2025 and most of this growth in population will occur in developing countries To feed the world with such a marked increase in population a great improvement in food production must be achieved particularly in these countries To meet this challenge present agricultural productivity must be increased on the cultivated land However in many developing countries particularly in Africa reduced soil fertility caused by continuous cropping with low nutrient input and the resultant nutrient mining of soils is a major threat both to food production and to ecosystem viability As a result of declining soil fertility together with increasing population pressure expansion of crop production to marginal lands and forested areas contribute to the destruction of natural ecosystems Food production is not only a quantitative challenge Improving the nutrient status of plants provides a further valuable means of enhancing food quality and is of extreme benefit to the health of both plants and humans There are several excellent examples showing that plants with optimum nutrient status are better adapted to biotic and abiotic stress factors Because of population pressures many global food systems are not currently providing enough micronutrients to ensure adequate micronutrient intakes in the human diet This has resulted in an increasing prevalence of micronutrient deficiencies that now afflicts over three billion people worldwide
