Rubian Society In Transition:

Civil Society and the State in Africa John Willis Harbeson, Donald S. Rothchild, Naomi Chazan, 1994 This text examines the potential value of the concept of civil society for enhancing the current understanding of state society relations in Africa The authors review the meanings of civil society in political philosophy as well as alternative approaches to employing the concept in African settings Considering both the patterns of emerging civil society in Africa and issues relating to its further development they give particular emphasis to the cases of Cote d'Ivoire Ghana Kenya Nigeria Sudan Tanzania Uganda and Zaire

Spain, Third Edition John A. Crow, 2005-05-10 A readable and erudite study of the cultural history of Spain and its people Spanish Culture and Society Barry Jordan, 2017-09-25 This glossary offers an exciting introduction to the diversity and richness of Spanish culture and society and a route map to further study Designed specifically with undergraduates in mind it contains around 450 concise alphabetically arranged and accessible explanations of the key words events figures and concepts in Spain since 1939 The Politics of Transition in Kenya W. Odhiambbo-Mbai, 2003 **Democratic Transitions in East Africa** F. Wafula Okumu, 2019-07-16 Originally published in 2004 Genocide in Rwanda massive floods of refugees and displaced people in the Horn of Africa violent civil wars in the West African countries of Sierra Leone and Liberia these are testimonies to the tremendous cost to grassroots communities when the authority and legitimacy of national political systems and leaders are called into question The consolidation of democracy represents one tangible strategy to restore authority and legitimacy of political rule providing the peace and security necessary for political enfranchisement and economic opportunity This volume explores the factors that are crucial to the emergence of democratic political systems on the African continent specifically focusing on Kenya Tanzania and Uganda It highlights the political challenges facing these countries during this crucial transition period and provides insights that are applicable to other countries engaged in this process in Africa and beyond **Scientific Modeling and Simulations**

Sidney Yip, Tomas Diaz Rubia, 2010-04-07 Although computational modeling and simulation of material deformation was initiated with the study of structurally simple materials and inert environments there is an increasing demand for predictive simulation of more realistic material structure and physical conditions In particular it is recognized that applied mechanical force can plausibly alter chemical reactions inside materials or at material interfaces though the fundamental reasons for this chemomechanical coupling are studied in a material specific manner Atomistic level simulations can provide insight into the unit processes that facilitate kinetic reactions within complex materials but the typical nanosecond timescales of such simulations are in contrast to the second scale to hour scale timescales of experimentally accessible or technologically relevant timescales Further in complex materials these key unit processes are rare events due to the high energy barriers associated with those processes Examples of such rare events include unbinding between two proteins that tether biological cells to extracellular materials 1 unfolding of complex polymers stiffness and bond breaking in amorphous glasses and gels

2 and diffusive hops of point defects within crystalline alloys 3 *Governance Reform in Africa* Jerome

Bachelard, 2013-07-24 Poor governance is increasingly recognized as the greatest impediment to economic development in Sub Saharan Africa. Currently some impressive governance reforms are underway in many countries. This includes cases such as Nigeria formerly the most corrupt country in the world according to Transparency International. Yet other countries such as Chad are still in reform deadlock. To account for these differences this book examines governance reform in Sub Saharan Africa based on an analysis of international and domestic pressures and counter pressures. It develops a four phase model explaining why governance reforms advance in some instances whilst in others governance reforms stagnate or even relapse. No study has sought to systematically examine the political forces both international and domestic behind the successful conduct of governance reform in Sub Saharan Africa. Yet coordination, collaboration and mutual support between international and domestic actors is critical to push individual governments onto the path of reform. This book shows that while international and domestic pro reform pressures are important an analysis of anti reform pressures is also necessary to explain incomplete or failed reform. The main theoretical arguments are structured around four hypotheses. The hypotheses are theoretically generated and tested over four case studies: Madagascar, Kenya, Nigeria and Chad. On this basis the good governance socialization process is inductively developed in the concluding chapter. This model illustrates how governance practices can evolve positively and negatively in all countries of Sub Saharan Africa based on the nature and relative strength of international and domestic pressures and counter pressures.

Training Readers and Writers for a Multimodal and Multimedia Society: Cognitive Aspects Ester Trigo-Ibanez, Inmaculada Clotilde Santos Diaz, Marcela Jarpa, 2024-02-07

Contemporary societies have been advancing gradually towards the construction of a model of a literate population. Significant efforts have been made so that most citizens can access various sources today using their reading and writing abilities but are we really prepared to face the information age? Is information literacy being promoted from schools? Are individual capabilities being considered? Do we have a true critical literacy? This article collection aims to show an overview of the most recent research ranging from the individual to the collective from the subject's competencies and their beliefs to the way to develop them from school. There is room in this Research Topic for investigations belonging to the linguistic, psychological and didactic field. This Research Topic aims to address a pressing problem in contemporary world societies. It is proposed to offer various contributions related to critical literacy in general and reading and writing. In this sense research that addresses analog and digital reading writing processes, academic literacy and the use of resources such as non-fiction illustrated books to develop critical thinking will be welcome. But also and in a very important way the cognitive processes of the subject will be considered not only to deal with access to information but also in the construction of their mental lexicon, an issue that offers the vision of the world of those who are immersed in literacy and in the post truth era. **The**

2001 invasion of Afghanistan by United States and coalition forces was followed by a flood of aid and development dollars and experts representing well over two thousand organizations each with separate policy initiatives geopolitical agendas and socioeconomic interests This book examines the everyday actions of people associated with this international effort with a special emphasis on small players individuals and groups who charted alternative paths outside the existing networks of aid and development This focus highlights the complexities complications and contradictions at the intersection of the everyday and the geopolitical showing how dominant geopolitical narratives influence daily life in places like Afghanistan and what happens when the goals of aid workers or the needs of aid recipients do not fit the narrative Specifically this book examines the use of gender need and grief as drivers for both common and exceptional responses to geopolitical interventions Throughout this work Jennifer L Fluri and Rachel Lehr describe intimate encounters at a microscale to complicate and dispute the ways in which Afghans and their country have been imagined described fetishized politicized vilified and rescued The authors identify the ways in which Afghan men and women have been narrowly categorized as perpetrators and victims respectively They discuss several projects to show how gender and grief became forms of currency that were exchanged for different social economic and political opportunities Such entanglements suggest the power and influence of the United States while illustrating the ways in which individuals and groups have attempted to chart alternative avenues of interaction intervention and interpretation

Understanding and Mitigating Ageing in Nuclear Power Plants Philip G

Tipping, 2010-10-26 Plant life management PLiM is a methodology focussed on the safety first management of nuclear power plants over their entire lifetime It incorporates and builds upon the usual periodic safety reviews and licence renewals as part of an overall framework designed to assist plant operators and regulators in assessing the operating conditions of a nuclear power plant and establishing the technical and economic requirements for safe long term operation Understanding and mitigating ageing in nuclear power plants critically reviews the fundamental ageing degradation mechanisms of materials used in nuclear power plant structures systems and components SSC along with their relevant analysis and mitigation paths as well as reactor type specific PLiM practices Obsolescence and other less obvious ageing related aspects in nuclear power plant operation are also examined in depth Part one introduces the reader to the role of nuclear power in the global energy mix and the importance and relevance of plant life management for the safety regulation and economics of nuclear power plants Key ageing degradation mechanisms and their effects in nuclear power plant systems structures and components are reviewed in part two along with routes taken to characterise and analyse the ageing of materials and to mitigate or eliminate ageing degradation effects Part three reviews analysis monitoring and modelling techniques applicable to the study of nuclear power plant materials as well as the application of advanced systems structures and components in nuclear power plants Finally Part IV reviews the particular ageing degradation issues plant designs and application of plant life management PLiM practices in a range of commercial nuclear reactor types With its distinguished international team of

contributors Understanding and mitigating ageing in nuclear power plants is a standard reference for all nuclear plant designers operators and nuclear safety and materials professionals and researchers Introduces the reader to the role of nuclear power in the global energy mix Reviews the fundamental ageing degradation mechanisms of materials used in nuclear power plant structures systems and components SSC Examines topics including elimination of ageing effects plant design and the application of plant life management PLiM practices in a range of commercial nuclear reactor types

Theory and Application of Quantum-Based Interatomic Potentials in Metals and Alloys John A.

Moriarty,2023-08-17 Atomistic computer simulations are often at the heart of modern attempts to predict and understand the physical properties of real materials including the vast domain of metals and alloys Historically highly simplified empirical potentials have been used to provide the interatomic forces needed to perform such simulations but true predictive power in these materials emanates from fundamental quantum mechanics In metals and alloys especially a viable path forward to the vastly larger length and time scales offered by empirical potentials while retaining the predictive power of quantum mechanics is to course grain the underlying electronic structure of the material and systematically derive quantum based interatomic potentials from first principles This book spans the entire process from foundation in fundamental theory to the development of accurate quantum based potentials for real materials to the wide spread application of the potentials to the atomistic simulation of structural thermodynamic defect and mechanical properties of metals and alloys
