Food Security and Nutrition Uwe Kracht, Manfred Schulz, 1999 The persistence of an unacceptably high level of hunger and malnutrition worldwide presents a serious challenge to the world on the threshold of the third millennium Although enough food is produced to feed mankind about 840 million people go hungry among them are 185 million pre school children that are severely underweight for their age Since an additional 80 million people have to be fed each year achieving food security is a central global challenge if not the most important development issue The aim of the reader is to analyze actual problems in the field of food security and nutrition and to discuss present and future strategies to overcome hunger Food security is a complex subject In order to master this complexity we distinguish between four dimensions of analyses Theoretical analytical empirical descriptive normative political institutional Series Spektrum Berliner Reihe zu Gesellschaft Wirtschaft und Politik in Entwicklungsländern Berlin Series on Society Economy and Politics in Developing Countries Vol 50
