Thermal Management in Automotive Applications T Yomi Obidi, 2015-03-30 With new and more stringent standards addressing emission reduction and fuel economy the importance of a well developed engine thermal management system becomes even greater With about 30% of the fuel intake energy dissipated through the cooling system and another 30% through the exhaust system it is to be expected that serious research has been dedicated to this field Thermal Management in Automotive Applications edited by Dr T Yomi Obidi brings together a focused collection of SAE technical papers on the subject It offers insights into how thermal management impacts the efficiency of engines in heavy vehicles the effects of better coolant flow control and the use of smart thermostat and next generation cooling pumps It also provides an in depth analysis of the possible gains in optimum warm up sequence and thermal management on a small gasoline engine With continuously increasing gadgetry in modern vehicles the average temperature in the engine compartment has seen significant increase It is important to be able to divert the heat away from passengers as well as from some components that may be negatively impacted by excessive temperatures Thermal Management in Automotive Applications points out solutions to this challenge including material and design options

Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles National Research Council, Transportation Research Board, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee to

Assess Fuel Economy Technologies for Medium- and Heavy-Duty Vehicles,2010-08-30 Technologies and Approaches to Reducing the Fuel Consumption of Medium and Heavy Duty Vehicles evaluates various technologies and methods that could improve the fuel economy of medium and heavy duty vehicles such as tractor trailers transit buses and work trucks The book also recommends approaches that federal agencies could use to regulate these vehicles fuel consumption Currently there are no fuel consumption standards for such vehicles which account for about 26 percent of the transportation fuel used in the U S The miles per gallon measure used to regulate the fuel economy of passenger cars is not appropriate for medium and heavy duty vehicles which are designed above all to carry loads efficiently Instead any regulation of medium and heavy duty vehicles should use a metric that reflects the efficiency with which a vehicle moves goods or passengers such as gallons per ton mile a unit that reflects the amount of fuel a vehicle would use to carry a ton of goods one mile This is called load specific fuel consumption LSFC The book estimates the improvements that various technologies could achieve over the next decade in seven vehicle types For example using advanced diesel engines in tractor trailers could lower their fuel consumption by up to 20 percent by 2020 and improved aerodynamics could yield an 11 percent reduction Hybrid powertrains could lower the fuel consumption of vehicles that stop frequently such as garbage trucks and transit buses by as much 35 percent in the same time frame
