Salmon Of The World:

Salmon, the World's Most Harassed Fish Anthony Netboy, 1980 **Salmon of the World** Ernest George Schwiebert, 1970 **State of the World's Oceans** Michelle Allsopp, Stefan E. Pambuccian, Paul Johnston, David Santillo, 2008-12-16 The world's oceans cover 70% of the earth's surface and are home to a myriad of amazing and beautiful creatures. However, the biodiversity of the oceans is increasingly coming under serious threat from many human activities including overfishing, use of destructive fishing methods, pollution, and commercial aquaculture. In addition, climate change is already having an impact on some marine ecosystems. This book discusses some of the major threats facing marine ecosystems by considering a range of topics under chapters discussing biodiversity. Chapter 1: fisheries. Chapter 2: aquaculture. Chapter 3: pollution. Chapter 4: and the impacts of increasing greenhouse gas emissions. Chapter 5: It goes on to explore solutions to the problems by discussing equitable and sustainable management of the oceans. Chapter 6: and protecting marine ecosystems using marine reserves. Chapter 7: Presently, 76% of the oceans are fully or overexploited with respect to fishing, and many species have been severely depleted. It is abundantly clear that in general, current fisheries management regimes are to blame for much of the widespread degradation of the oceans. Many policy makers and scientists now agree that we must adopt a radical new approach to managing the seas, one that is precautionary in nature and has protection of the whole marine ecosystem as its primary objective. This ecosystem-based approach is vital if we are to ensure the health of our oceans for future generations.
