Contemporary Psychiatry Fritz Henn,Norman Sartorius,Hanfried Helmchen,Hans Lauter,2013-11-11 Contemporary Psychiatry is an international textbook developed on the basis of the experience with its first three German editions making it a work with long and distinguished tradition It combines the German tradition of phenomenology and diagnosis going back to Kraepelin with the Anglo American tradition and the DSM IV diagnostic system In doing so Contemporary Psychiatry becomes a unique source among psychiatric texts offering a truly international approach to state of the art knowledge and future perspectives of psychiatry The four

internationally renowned editors were able to acquire the leading specialists as contributors. No less than 120 authors from 10 different countries ensure an extremely high standard and guarantee the consideration of cross cultural aspects. A special feature of Contemporary Psychiatry is that it includes chapters on psychiatric disorders caused by extreme circumstances such as for example migration, torture, rape, violence and natural and man made disasters.

Environmental and Chemical Toxins and Psychiatric Illness James S. Brown, 2008-08-13. During the past 60 years the number of chemical disasters worldwide from military, occupational and environmental sources has risen at an alarming rate. The profound controversy surrounding many chemicals makes objective analysis nearly impossible. Yet now more than ever with the daily exposure to a wide range of chemicals and the increased threat of chemical terrorism it is critical that we understand the role of chemicals in causing psychiatric illness. Unlike related books this remarkable reference is intended specifically for psychiatric applications and is thus the definitive sourcebook for the many professionals called on to respond to these events. This work stands alone as the first on this topic to be written by a psychiatrist and the first to bring together the military, occupational and environmental exposures causing psychiatric illness including multiple chemical sensitivities, mass hysteria, radiation exposures, community stress reactions and Gulf War and other syndromes. Unique highlights include: A summary of the reported psychiatric symptoms attributed to each chemical class: chemical weapons, pesticides, fumigants, metals, solvents, gases, PCBs, Agent Orange and other miscellaneous chemicals in tables for easy reference. We use personal care products, take prescription drugs, pump gasoline, drink alcohol and spray insecticides as part of our everyday lives. Yet rarely do we realize that significant exposures to the chemicals described in this book, many of which we are exposed to in daily activities, can damage the central nervous system causing psychiatric illness. A comprehensive bibliography in every chapter of all the important material in English language medical journals and books that has appeared on this subject since the late 19th century. These bibliographies cover everything from the first published reports of the dangers of carbon disulfide in the French rubber industry, dangers that American medicine ignored for years, through more recent large scale chemical exposures that have serious long term consequences e.g. Love Canal. The latest information about terrorist and military uses of chemical weapons of critical relevance in psychiatry today from World War I combatants exposed to chlorine, phosgene, mustard gas, arsenic and cyanide to the first organophosphate or nerve gases such as tabun and sarin developed by the Germans before and during World War II and used by Iraq in the Gulf War and by a religious cult in the terrorist subway attacks in Tokyo and Matsumoto, Japan. Quite simply this book is a must have for psychiatric and medical professionals everywhere with extended appeal among laypersons such as environmental consumer advocates, attorneys, insurance professionals, industrial hygienists, disaster planners and medical librarians.

by substantial amounts This new perspective has been accompanied by efforts designed to explore the responsible mechanisms to design applicable risk assessment procedures and to determine the consequent policy implications This publication includes 25 papers from international experts and includes human neurobehavioral toxicity animal behavioral methods selected model compounds and risk assessment
