The concepts of geometry are of a very different nature they denote so to speak different layers of geometric thinking some arguments use only concepts such as point straight line and incidence others require angles and distances still others symmetry considerations Each of these conceptual fields determines a separate subfield of geometry and a separate chapter of this book with the exception of the last mentioned conceptual field symmetry which runs through all the others Incidence Projective geometry Parallelism Affine geometry Angle Conformal Geometry Distance Metric Geometry Curvature Differential Geometry Angle as distance measure Spherical and Hyperbolic Geometry Symmetry Mapping Geometry The mathematical experience acquired in the visual space can be easily transferred to much more abstract situations with the help of the vector space notion The generalizations beyond the visual dimension point in two directions Extension of the number concept and transcending the three illustrative dimensions This book is a translation of the original German 1st edition Geometrie Anschauung und Begriffe by Jost Hinrich Eschenburg published by Springer Fachmedien Wiesbaden GmbH part of Springer Nature in 2020 The translation was done with the help of artificial intelligence machine translation by the service DeepL com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to
