Abstract:

Background: *Studies of educational institutionalism warn: 1) the administration of a traditional culture and leadership as the guiding axis of academic programs; 2) the establishment of an agenda focused on knowledge management, entrepreneurship and innovation; 3) strategic alliances between universities and companies as the central axis of vocational training; 4) multidisciplinary collaborative networks.*

Method: *A non-experimental, cross-sectional and exploratory study was carried out with a non-probabilistic selection of indexed sources in repositories of UNAM and UAEMEX.*

Results: *The model specification includes five explanatory hypotheses of the dependency relationship trajectories between eight variables - beliefs, values, perceptions, knowledge, motives, attitudes, intentions and behavior.*

Conclusions: *The specification of the model establishes the differences between teachers, students and administrators regarding the evaluation, accreditation and certification of the quality of academic processes and products, as well as anticipates knowledge management, entrepreneurship and innovation scenarios.*

Keywords: *Higher Education, Educational Innovation, Transformational Leadership Model, OECD Member Countries, ICT.*

1. INTRODUCTION

Studies on 1 venture established: 1) The synergy between higher education institutions and micro, small and medium enterprises (MSMEs); 2) The establishment of knowledge networks between universities, technological institutes, research centers and industries; 3) The formation of scientific, technological and industrial agendas prior to the multidisciplinary academic exchange; 4) The framing of topics such as technoscience, nanotechnology and digital entrepreneurship; 5) The formation of talents and leadership [1].

The purpose of this paper is to specify a model for the study of correlation trajectories between the variables reviewed in the theoretical, conceptual and empirical frameworks related to digital entrepreneurship [2].

Indicators of educational quality of the Organization for Economic Co-operation and Development (OECD), located in Mexico in recent [3].

This text intends to carry out a non-experimental, cross-sectional and exploratory study of three portals that collect and give access to scientific documents published in Spanish (Dialnet, Latindex, Redalyc), also called "indexed sources", to: a) review the human capital theory to extract indicators of formative quality; b) establish the hypotheses of correlation trajectories between the quality of life indicators; c) compare the specified model with others to discuss its scope and limits; d) propose a comprehensive model considering the theoretical, conceptual and empirical frameworks reviewed [4].

The specified model included four hypotheses, five constructs and four indicators for each of these; all related to the correlation trajectories between the variables [5].

Study in relation to other models of leadership and using electronic devices, identified the scope and limits of the specified model as well as possible integration into future research [6].

A comprehensive model for the study of digital entrepreneurship would include leadership and psychological variables around the acceptance, adoption and intensive use of Information and Communication Technologies (ICT) [7]. First, it states that e1 education system in Mexico, at the upper level, accuses a greater presence of Higher Education Institutions (IES) of a private nature regarding: public IES. Being Mexico City, the entity with the most private HEIs, followed by the State of Mexico and the state of Puebla. While it is the state of Veracruz, which has the highest percentage of public HEIs, followed by Mexico City and the State of Mexico [8].

On the other hand, to carry out a comparison of the distribution of both public IES and private, with other countries in the Organization for Cooperation and Development Economic (OECD) structured under a scheme that favors financing public of the education sector, above others, such as the health sector; or balanced financing; it is observed that Mexico is among the countries that allocate greater public financing to the education sector [9].

However, at the same time, it is located at the same level as the Czech Republic, a country that allocates more economic resources to the health area. In addition, it is at a lower level than Canada, which has a balanced system of financing in education and health [10].

From the above, it follows that, although Mexico occupies intermediate places in the OECD listings, if
