Oil/water Separator Evaluation John Mittleman, 1975 A coalescing plate type oil water separator was evaluated One series of tests involved separating Navy Special Fuel Oil from seawater A permanent emulsion of seawater in NSFO formed

in the closed loop experiment set up and required termination of these tests Another series of tests involved separating contaminated Navy Distillate from seawater These tests were successfully completed Field experience indicated that the coalescing plate configuration could separate ND out of seawater producing a water effluent containing approximately 200 ppm oil and an oil effluent containing less than 5 percent water However the reliability of the separator s automatic mode was unsatisfactory Author *Selected Water Resources Abstracts* ,1981 **Surface and Colloid Chemistry** K. Wang, Guochen Zhao, 2019-12-05 Superhydrophobic surfaces with a water contact angle 150 have attracted both academic and industrial interest due to their wide range of applications such as water proofing anti fogging antifouling anti icing fluidic drag reduction and anti corrosion Currently the majority of superhydrophobic coatings are created using organic chemicals with low surface energy However the lack of mechanical strength and heat resistance prevents the use of these coatings in harsh environments Quality superhydrophobic coatings developed using inorganic materials are therefore highly sought after Ceramics are of particular interest due to their high mechanical strength heat and corrosion resistance Such

superhydrophobic coatings have recently been successfully fabricated using a variety of ceramics and different approaches and have shown the improved wear and tribocorrosion resistance properties This Special Issue will focus on the recent developments in the fabrication of superhydrophobic coatings and their robustness against corrosion and wear resistance but the original work on other properties of superhydrophobic coatings are also welcome In particular the topics of interest include but are not limited to Robust superhydrophobic coatings Coatings with super wettability in multifunctional applications Wetting effects on corrosion and tribology Hierarchical Coating for wetting and modelling **Low-Carbon Technologies for the Petroleum Industry** Kaiqiang Zhang,Rameshwar D.
