Premalignancy And Tumor Dormancy:

Premalignancy and Tumor Dormancy Eitan Yefenof, Richard H. Scheuermann, 1996-01-01 The phenomena of cancer dormancy and premalignancy are well recognized but poorly understood The purpose of this book is to bring together information on these topics from clinical and laboratory analysis of different cancer models Fourteen chapters written by experts in the field address basic and clinical issues pertaining to the tumor dormant and premalignant states Experimental models and clinical situations are described Cellular molecular and micro environmental factors underlying these phenomena are reviewed and considerations regarding medical management are discussed **Premalignancy and Tumor Dormancy** Eitan Yefenof, 1996-01-01 *Tumor Dormancy, Quiescence, and Senescence, Volume 2* M.A. Hayat, 2013-11-29 In this second volume in the series exploring Tumor Dormancy Quiescence and Cellular Senescence discussion is focused on the role of tumor dormancy in diseases such as breast cancer melanoma prostate cancer liver cancer and lung cancer M A Hayat the series editor writes in the preface that little is known of factors regulating the transition of residual cancer into a dormant state or the subsequent reinitiation of growth A majority of us he says have in situ tumors that may remain dormant or may progress into a lethal form of cancer the former are prevented from recruiting their own blood supply Section I covers Molecular Mechanisms with chapters on the role of NAE inhibitor MLN4924 oncogene induced senescence the role played by mitogen activated protein kinase in the induction of cellular senescence mechanisms of premature cell senescence and other topics Section II examines Tumor and Cancer discussing defects in chromatin structure and diseases the role of fibrosis in tumor progression and the dormant to proliferative switch the function of ING proteins in cancer and senescence and more The final section is devoted to Stem Cells and Cancer Stem Cells featuring chapters showing that senescent derived pluripotent stem cells are able to redifferentiate into fully rejuvenated cells that the transcription factor Gata2 regulates quiescence in haematopoietic stem and progenitor cells and discussing dormancy and recurrence of cancer stem cells in bone The contributors point out that the quiescent state regulates hematopoietic stem cells and muscle stem cells and detail the role of kinase in the mediation of reversible quiescent state in a subset of ovarian pancreatic and colon cancers Molecular mechanisms underlying stress induced cellular senescence and accumulation of reactive oxygen species and induction of premature senescence are also presented Discussion includes the important role of microRNAs in oxidative stress induced apoptosis and senescence and the effect of microRNA as a modulator of cell proliferation in lung cancer The book includes an explanation of the suppression of cellular senescence in glioblastoma brain tumor Taking a broad and varied perspective this volume was written by 70 contributors representing 11 countries *Tumor Dormancy, Quiescence, and Senescence, Volume 1* M.A. Hayat, 2013-03-14 With a particular emphasis on tumor dormancy in breast lung prostate and liver cancers as well as in melanoma this first volume of a new Springer series focuses on the interrelationship between biological processes of aging and tumors both dormant and quiescent With detail supplied by numerous international researchers at the forefront of

cancer research the book examines a host of differing aspects of the topic Featured contributions analyze the role of the quiescent state in regulating hematopoietic and muscle stem cells They also explore the mediation by the kinase in the reversible quiescent state of a subset of ovarian pancreatic and colon cancers The book includes key research on the molecular mechanisms underlying stress induced cellular senescence in addition to those governing the accumulation of reactive oxygen species and the induction of premature senescence It also provides information on suppressing cellular senescence in the most common and most aggressive malignant primary brain tumor in humans glioblastoma multiforme With comprehensive and cutting edge information on therapeutic interventions and on the correct diagnosis of relevant neoplasms and with numerous color illustrations this is the most up to date assessment of current medical knowledge in this crucial area of medical research

Mechanisms of B Cell Neoplasia 1998 Fritz Melchers, Michael Potter, 2012-12-06

Workshops on the mechanisms of B cell neoplasia have been organized alternatively in Bethesda and Basel since 1983 Progress in our understanding of the development and responses of B lymphocytes is presented and discussed with the aim and hope to understand what might go wrong when B lymphocytes are transformed into malignant cells Such knowledge might lead to better diagnosis prevention and even cure of these terrible diseases The presentations at the Bethesda workshops are published as papers in volumes of Current Topics in Microbiology and Immunology while the presentations and discussions in Basel were transcribed and published in Editions Roche For the first time a Basel workshop held 4th 6th October 1998 that has been recorded and in part transcribed is being published as papers and discussions within Current Topics This volume is the latest of a long series which documents the excitements of ground breaking discoveries as well as the frustrations of our inability to fully understand the mechanisms leading to B cell neoplasia The papers at the workshop are presented when possible in the sequence in which they were given However to facilitate the organization and reading of the book and to highlight general topics and themes the papers are organized into five sections I B Cell and Plasma Cell Development II Chemokines and Chemokine Receptors III Chromosomal Translocations DNA Rearrangements and Somatic Hypermutations IV Biology of Lymphomagenesis B CLL Autoimmunity V Myeloma Plasmacytomas and Related Subjects

The Link Between Inflammation and Cancer Angus G. Dalgleish, Burkhard Haefner, 2006-03-05 A link between inflammation and cancer has been established many years ago yet it is only recently that the potential significance of this connection has become apparent Although several examples of chronic inflammatory conditions often induced by persistent irritation and or infection developing into cancer have been known for some time there has been a notable resistance to contemplate the possibility that this association may apply in a causative way to other cancers Examples for such progression from chronic inflammation to cancer are colon carcinoma developing with increased frequency in patients with ulcerative colitis and the increased incidence of bladder cancer in patients suffering from chronic Schistosoma infection Inflammation and cancer have been recognized to be linked in another context for many years i e with regards to pathologies resembling

chronic lacerations or wounds that do not heal More recently the immunology of wound healing has given us clues as to the mechanistic link between inflammation and cancer in as much as wounds and chronic inflammation turn off local cell mediated immune responses and switch on growth factor release as well the growth of new blood vessels angiogenesis Both of these are features of most types of tumours which suggest that tumours may require an immunologically shielded milieu and a growth factor rich environment Oral Premalignancy Ian C. Mackenzie,Erik Dabelsteen,Christopher A. Squier,1980

Genetically Engineered Mice for Cancer Research Jeffrey E. Green,Thomas Ried,2011-12-08 Genetically engineered mouse models for cancer research have become invaluable tools for studying cancer biology and evaluating novel therapeutic approaches This volume focuses on state of the art methods for generating analyzing and validating such models for studying aspects of human cancer biology Additionally these models are emerging as important pre clinical systems in which to test cancer prevention and therapeutic strategies in order to select compounds for testing in clinical trials

Immunointervention in Autoimmunity by Th1/Th2 Regulation Luciano Adorini,1997 **Neoplasms: Principles of Development and Diversity** Jules J. Berman,2009 This unique text is devoted to the full range of neoplastic properties exhibited by the comprehensive collection of human neoplasms Like no other book of it s kind it approaches cancer biology by surveying the diversity of neoplasms and by building a classification of neoplasms based on an understanding of the cellular options for tumor development By grouping neoplasms into a comprehensive classification we can develop class specific methods to prevent detect and treat cancers The book is divided into three broad units speciation classification and eradication In the process of developing a classification for neoplasms dozens of the fundamental questions in neoplastic development are asked and answered Neoplasms provides readers with a fascinating and enjoyable way to learn the otherwise arcane and dense subject of human tumor diversity
